SITECONTROL

Site Operator Guide

Running the gate: checking people and vehicles in and out, orientation, the muster, search, corrections and working without a signal.

All names in this guide are sample data. Screens shown are from the 2P Ice Road Entrance and Ice Pad posts; every post uses the same screens with its own name.

Contents

Section	Covers	Page
Getting Started	Logging in, the top bar, keyboard shortcuts	3
Checking People In	One person at a time	5
Checking People Out	Every check-out is a vehicle departure	10
Vehicle Check-In	A whole vehicle arriving at once	14
Expected Arrivals	Vehicles on the road to your post	17
Red Alert Bars	OVERDUE and LOST SIGNAL - what to do at the gate	19
Orientation	Posts that require orientation first	20
Muster	Live head count, past muster, printing	22
Search	Finding people, visits and trips	27
Corrections	Editing a person, removing a mistaken entry	30
Roster	Enrolling people and importing a list	32
Lost Signal	Working while the link is down	33
Troubleshooting	Things that catch people out	35
Quick Reference	One-page summary	36

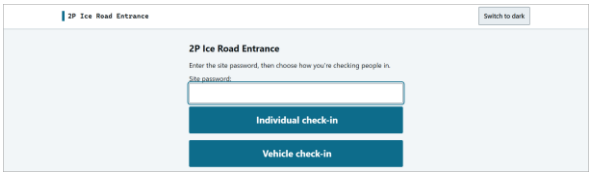

Trips, the operator console and overdue handling are covered in the separate **Dispatch Guide**; installing and setting up posts in the **Administrator Guide**.

Getting Started

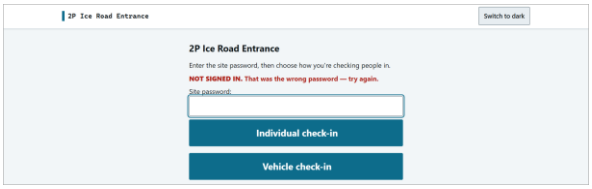

SiteControl runs in a web browser. Each post (gate) has its own address and its own copy of the records; posts share their records with each other automatically whenever the link is up.

Logging in

Enter the **site password**, then choose how you are checking people in: **Individual check-in** (one person at a time) or **Vehicle check-in** (a whole vehicle load). You can switch later from the top bar.

The login page.

A wrong password: "NOT SIGNED IN. That was the wrong password - try again."

Without logging in you can still **view** the muster, search, status and reports - but nothing can be recorded.

The top bar

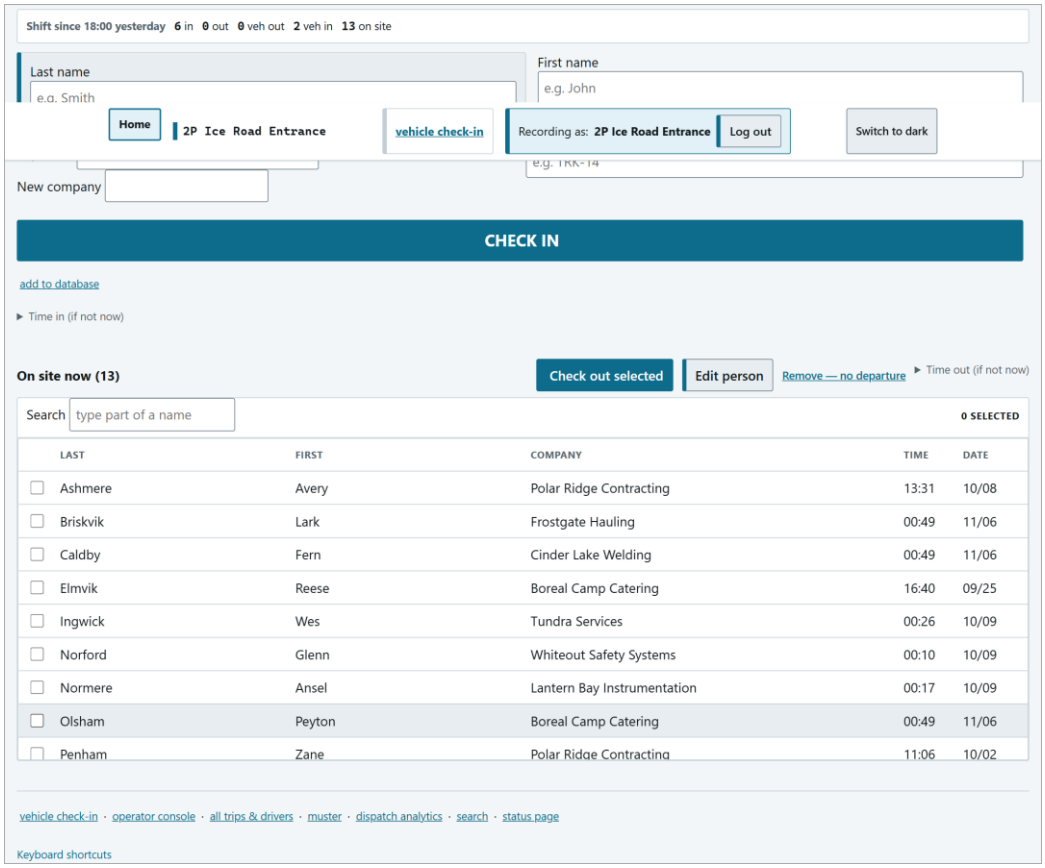

Home	Back to the post's start page.
vehicle check-in / individual check-in	Switches between the two gate screens.
sync pill	Green "sync ... healthy" = in contact with the other posts. Red "degraded" = not (see Lost Signal).
Recording as: <post>	Which post your entries are recorded against. **Log out** at the end of your shift.
Switch to dark / light	Changes the colour scheme for night use.

Links along the bottom of every page: vehicle check-in, operator console, all trips & drivers, muster, dispatch analytics, search, status page.

Keyboard shortcuts

Click **Keyboard shortcuts** at the bottom of the gate screen to show the list. The gate can be run without the mouse:

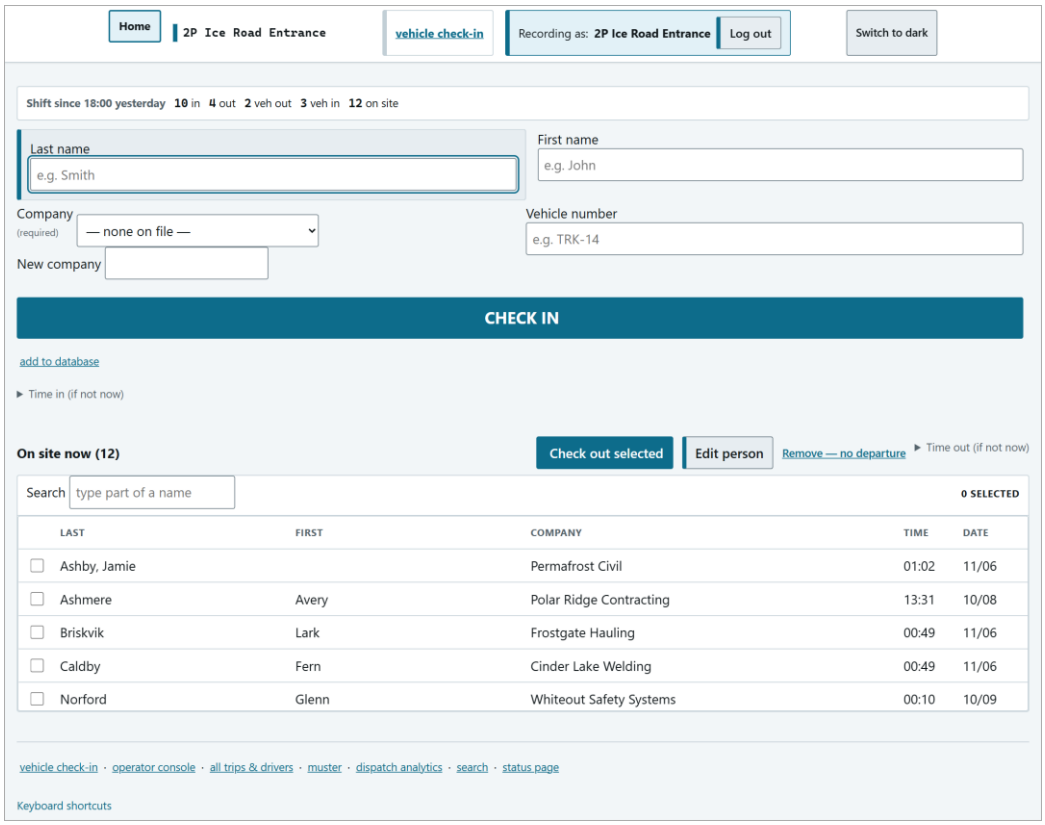

Key	Does
i	Jump to Check in (the Last name box)
o	Jump to Check out (the on-site list)
v	Vehicle check-in page
/	Search the on-site list
h	Home
?	Show / hide the shortcut list
Enter	Moves to the next box; stops at confirmations
Up / Down, Space	Move through the on-site list and tick a person

The gate screen with the keyboard shortcut list open (bottom).

Checking People In

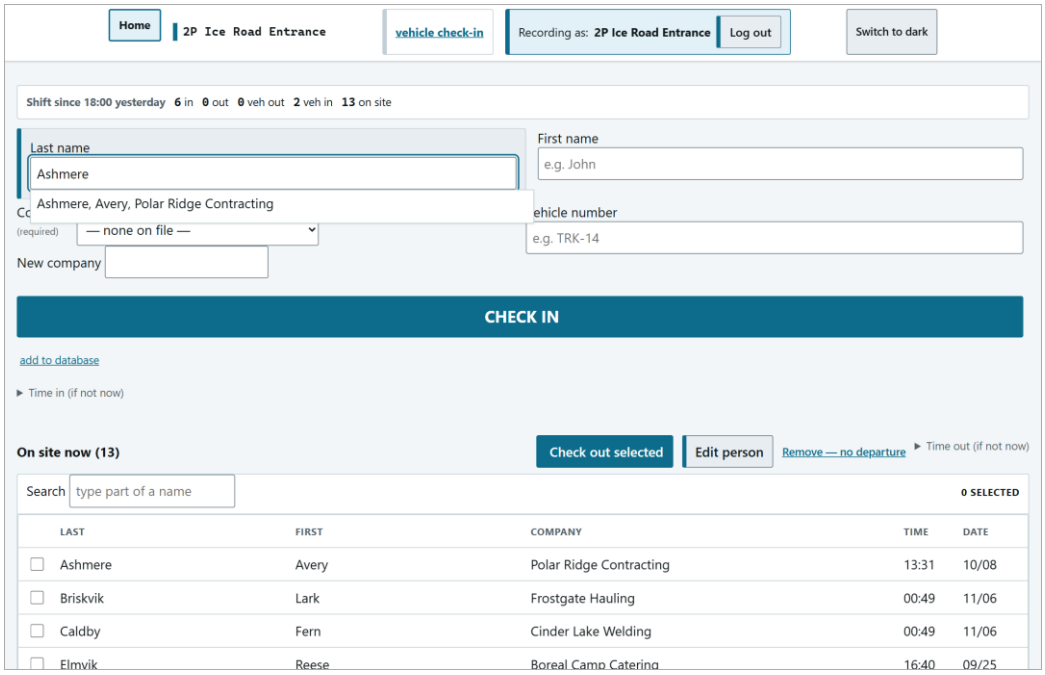

The **individual gate** screen has the check-in form at the top and the **On site now** list underneath. The strip across the top counts the shift so far: in, out, vehicles out, vehicles in, and on site.

The individual gate screen.

Step 1 - Find the person

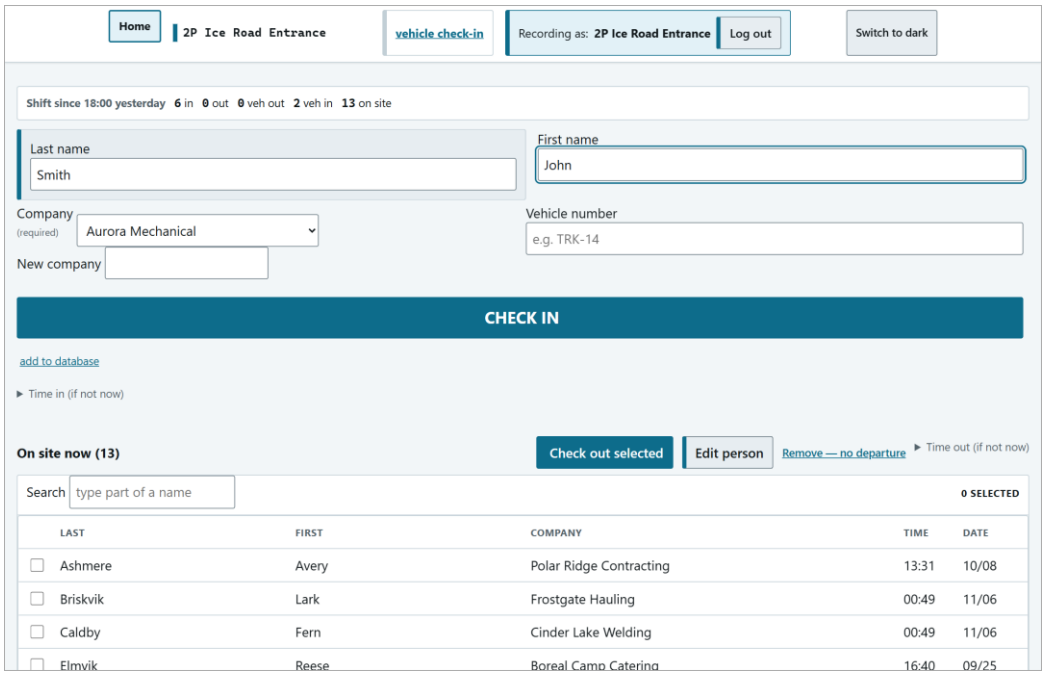

Start typing the **Last name**. A suggestion list appears (Last, First, Company) - pick the person and the form fills in.

Typing a last name brings up matching people from the roster.

Step 2 - Check the details and press CHECK IN

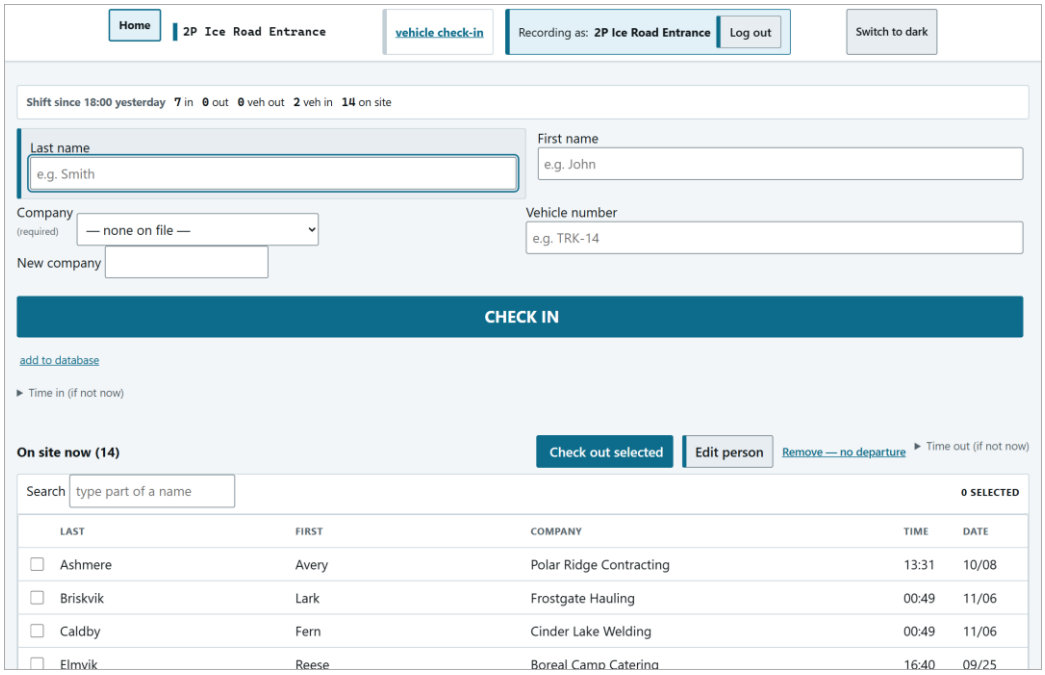

Company is required (pick it from the list, or choose "not listed: add a new company" and type it). **Vehicle number** is optional. Press **CHECK IN**, then **OK** on the pop-up "Check this person in now?".

Form filled in. Someone not yet on the roster is added to it automatically by checking them in.

Step 3 - Confirm they are on the list

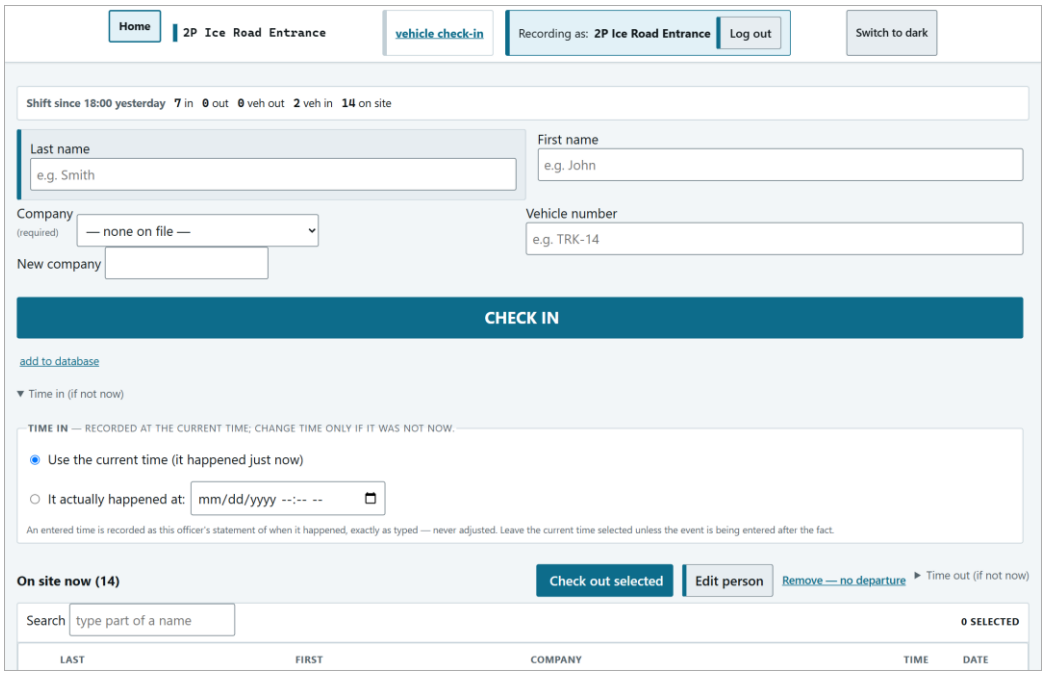

There is no "saved" message. A successful check-in is silent: the counters go up, the cursor goes back to Last name, and the person appears in **On site now**. Always glance at the list to confirm.

Smith, John now in the On site list; the counter went up.

If it happened earlier

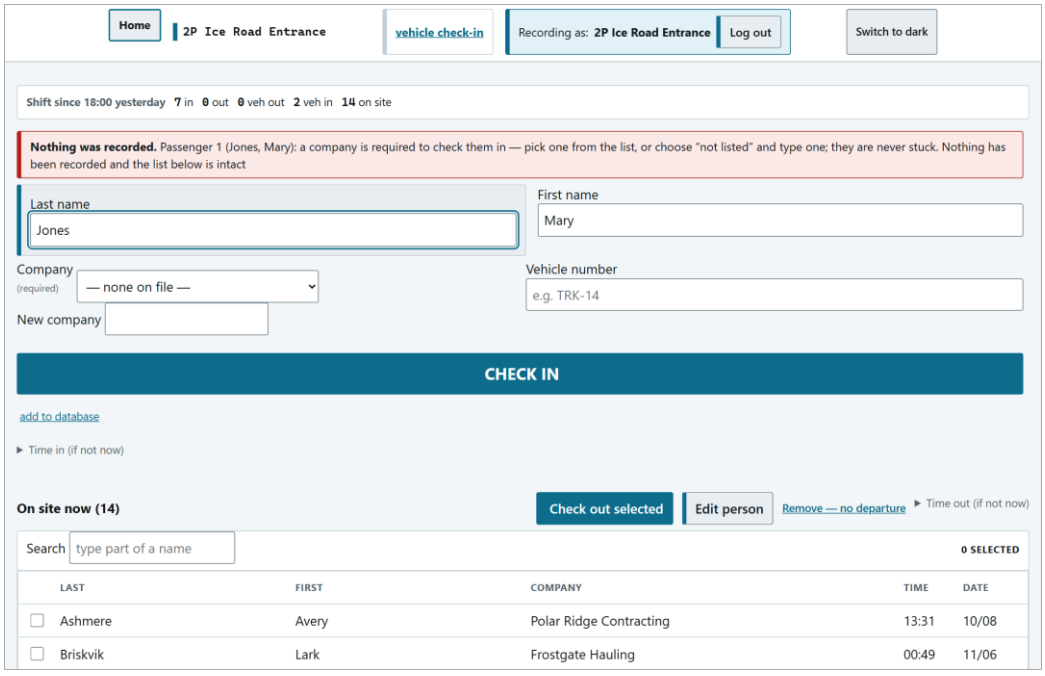

Open **Time in (if not now)** and choose **It actually happened at:** with the real date and time. The time is recorded exactly as typed, as your statement of when it happened.

Time in (if not now) opened.

If something is missing

A red **"Nothing was recorded."** message explains what to fix. Nothing has been saved; correct it and press CHECK IN again.

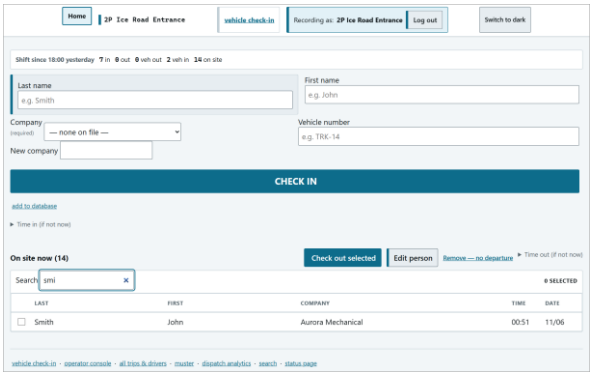

Company left blank. (The message says "Passenger 1" even when checking in one person - that is normal.)

Checking People Out

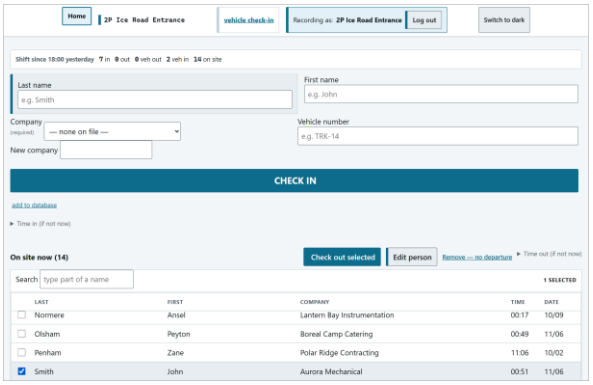

Every check-out is a vehicle departure. You record who is leaving, the vehicle, who is driving, where it is going and how long the trip should take. That trip time starts a timer: if the vehicle has not arrived in time, every post is alerted.

Step 1 - Tick who is leaving

In **On site now**, type part of a name in **Search** to narrow the list, tick each person leaving together on the same vehicle, then press **Check out selected**.

Searching the list.

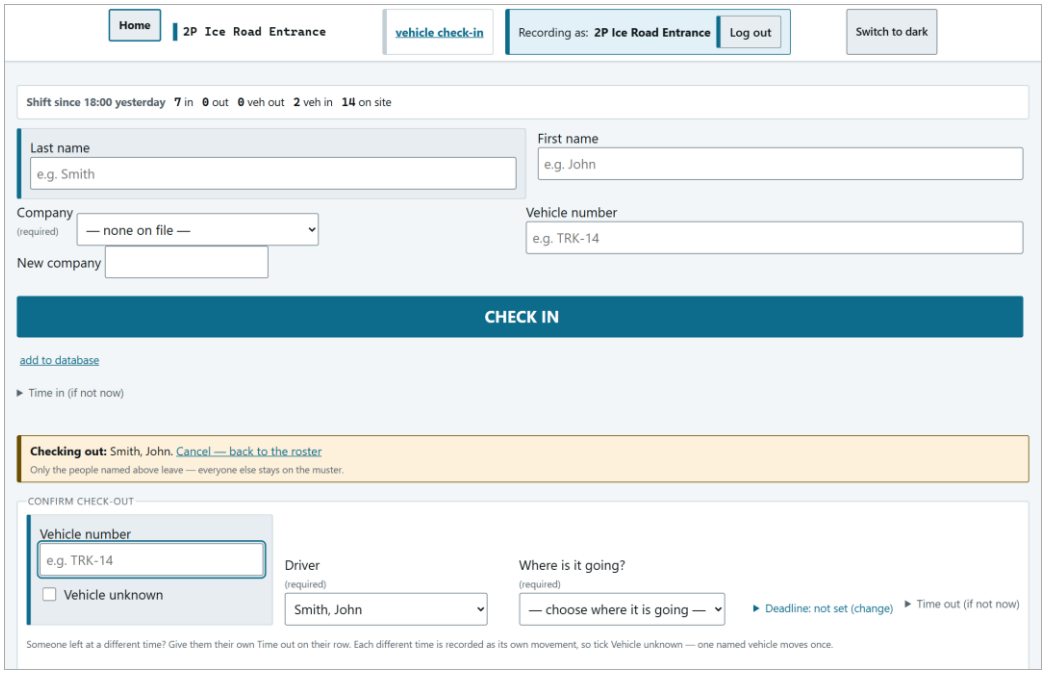

Person ticked.

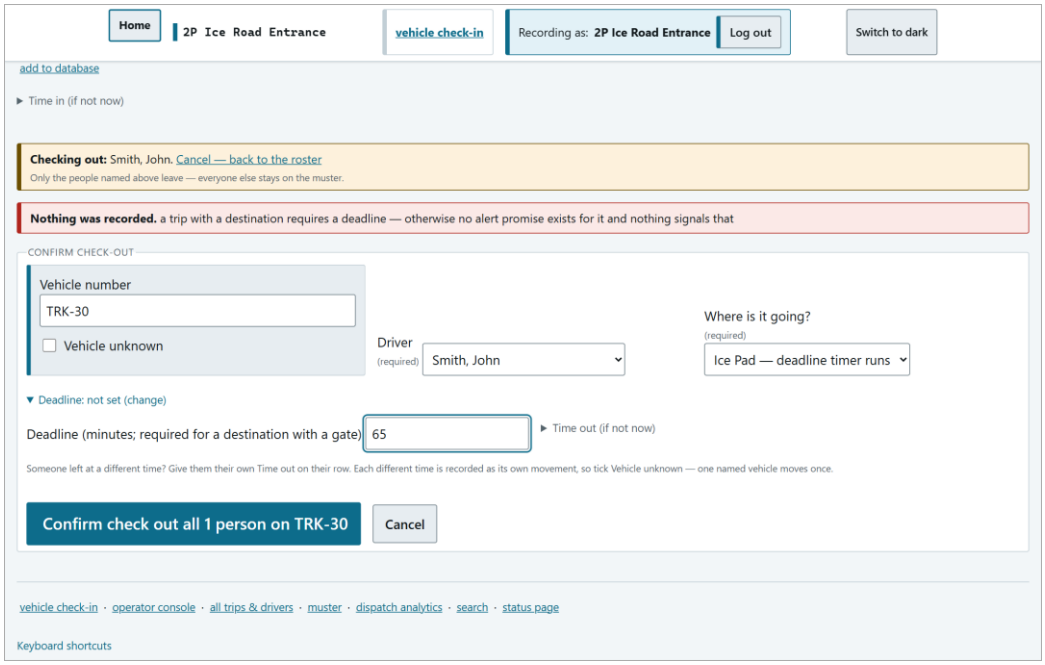

Step 2 - Fill in the departure

A yellow bar names exactly who is leaving ("everyone else stays on the muster") and the **CONFIRM CHECK-OUT** panel opens:

Vehicle number	As written on the vehicle. Tick **Vehicle unknown** only if you genuinely don't know it.
Driver (required)	Chosen from the people being checked out.
Where is it going? (required)	The destination post, e.g. "Ice Pad - deadline timer runs".
Deadline (minutes)	**Required for a destination with a gate - and NOT filled in for you.** Click "Deadline: not set (change)" and enter the travel allowance in minutes.
Time out (if not now)	Only if they actually left earlier.

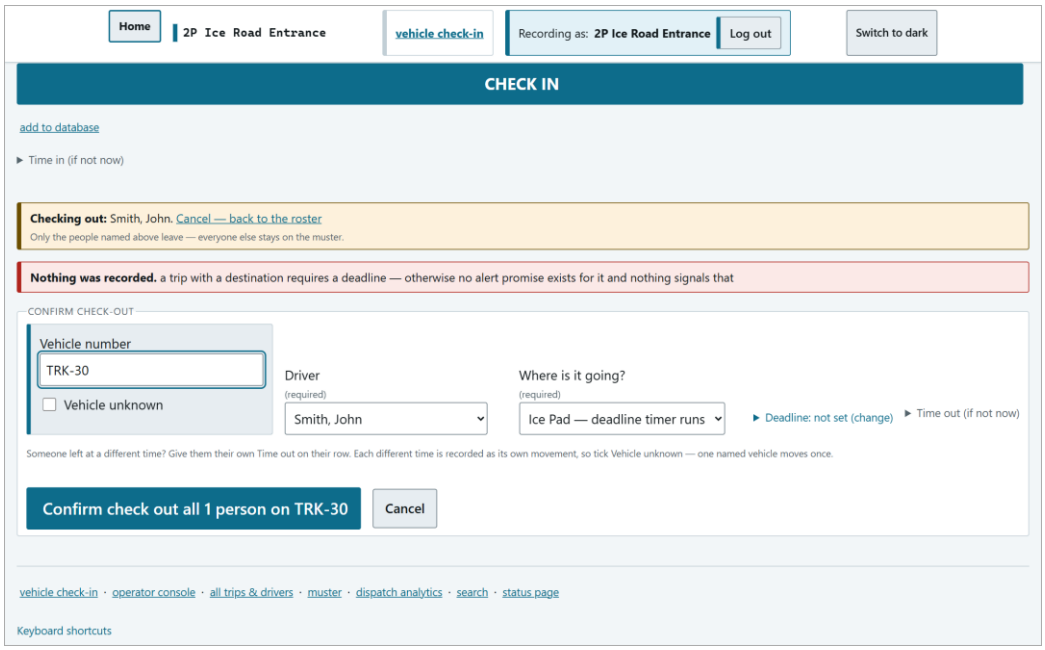

The CONFIRM CHECK-OUT panel after pressing Check out selected.

Vehicle, driver, destination and a 65-minute deadline filled in.

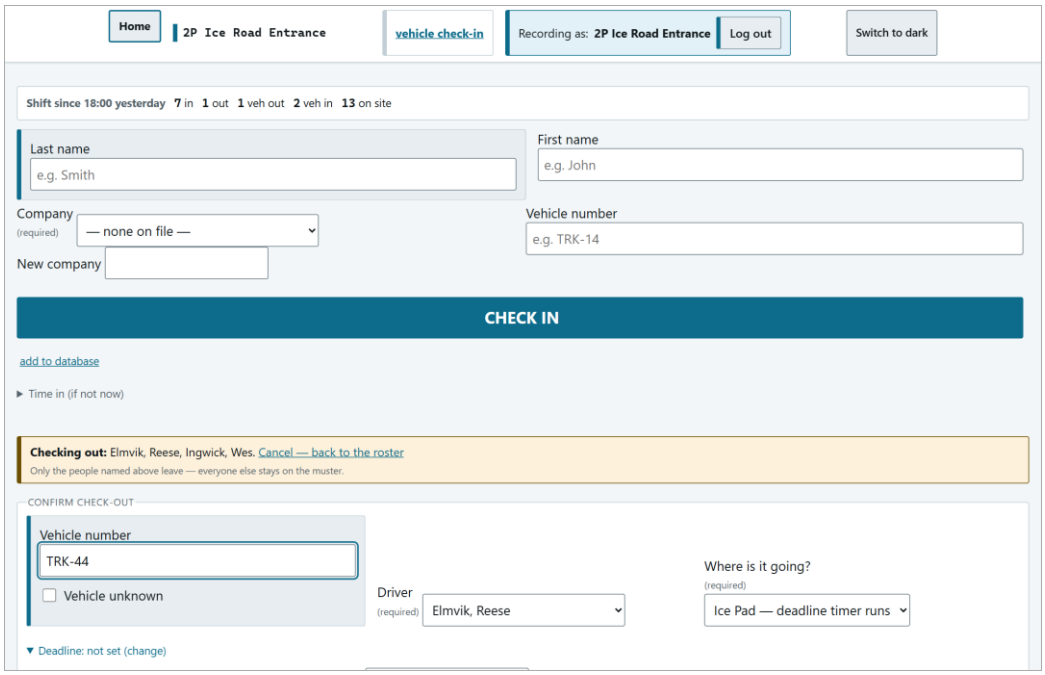

Press **Confirm check out all N person(s) on <vehicle>** and **OK** on the pop-up.

The most common mistake - no deadline

"Nothing was recorded. a trip with a destination requires a deadline..." - open Deadline and enter the minutes.

Two or more people on one vehicle

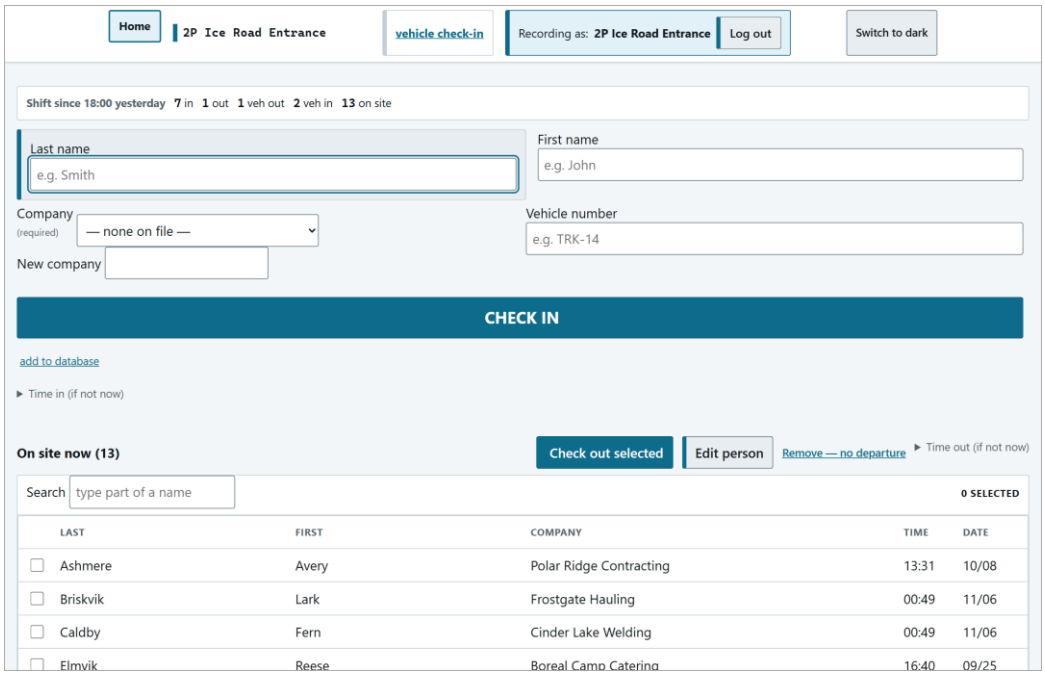

Two people ticked - one becomes the driver, both leave on the same vehicle.

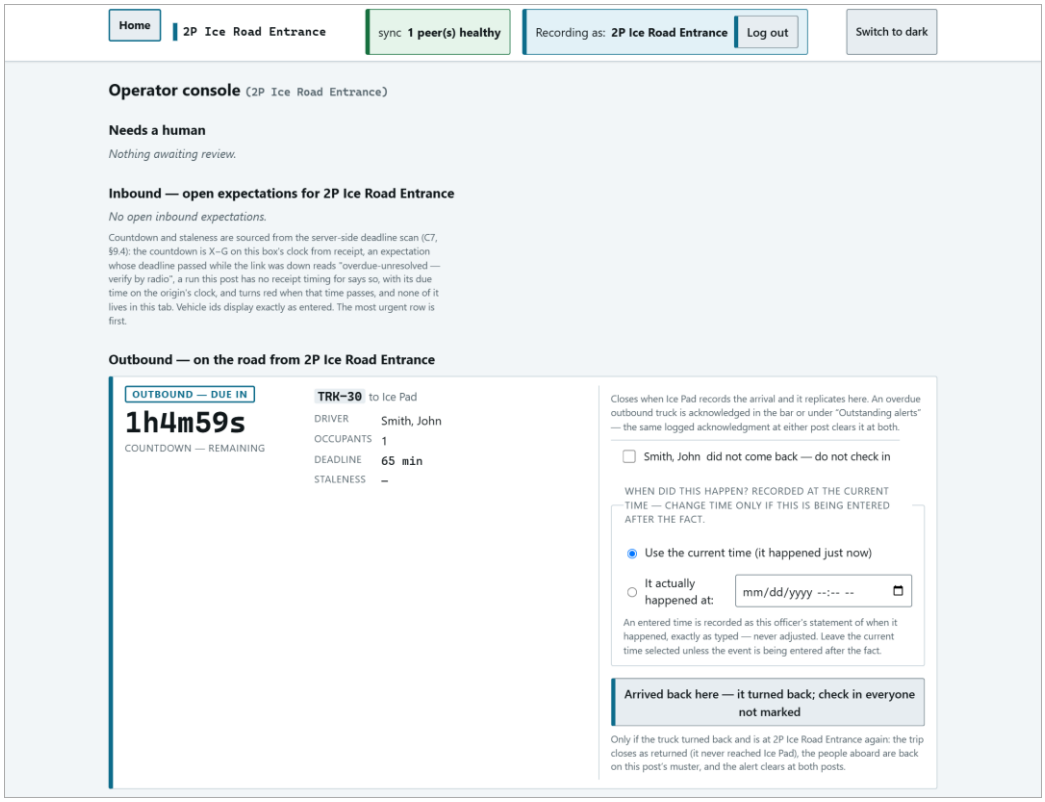

If one of them left at a different time, give them their own **Time out** on their row - they are then recorded as a separate movement.

Step 3 - Confirm they have gone

Again there is no saved message: the out counters go up and the people disappear from **On site now**. Their trip now shows on the **Operator console** with a countdown - from here it is followed by dispatch (see the Dispatch Guide).

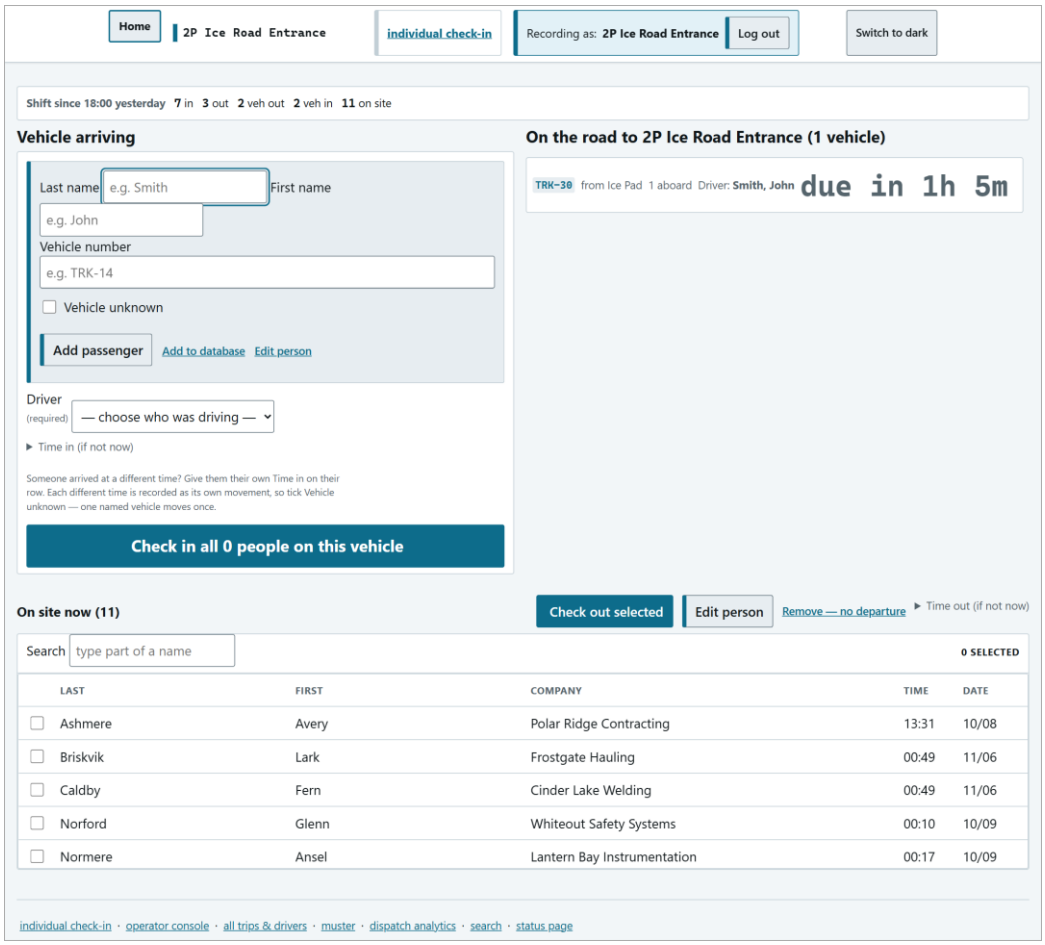

Smith, John has left the list; the shift counters show the departure.

The trip on the operator console: OUTBOUND - DUE IN 1h4m59s.

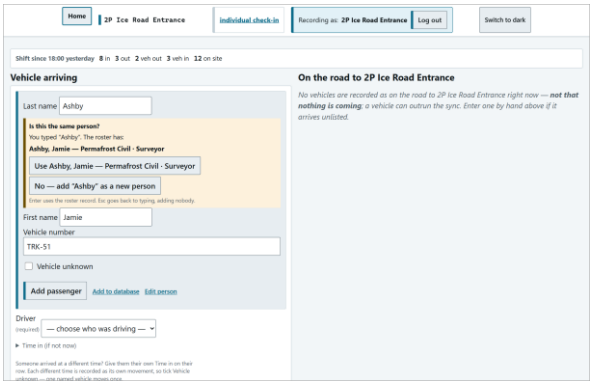

Vehicle Check-In

Use the **vehicle check-in** page when a vehicle arrives with several people aboard. Left side: **Vehicle arriving** (enter the load by hand). Right side: **On the road to <post>** (vehicles already expected - see Expected Arrivals).

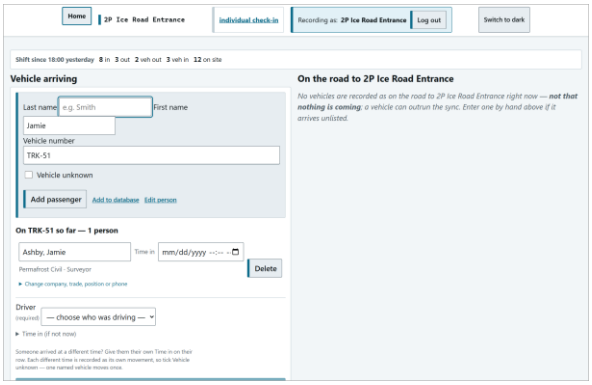

The vehicle check-in page.

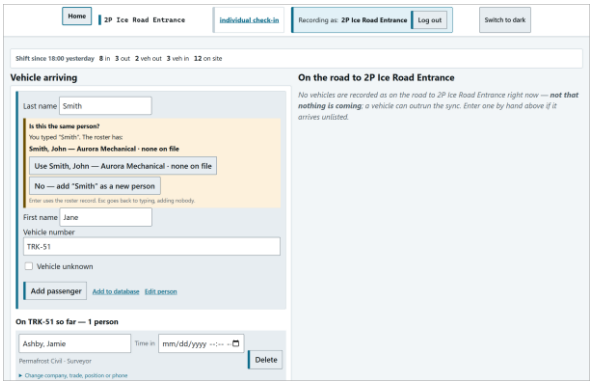

1	Type the **Last name** / **First name** of each person and press **Add passenger**. Enter the **Vehicle number** (or tick Vehicle unknown).
2	If the name matches someone on the roster you will be asked **"Is this the same person?"** - choose **Use <name>** or **No - add as a new person**. Enter uses the roster record; Esc goes back to typing.
3	A new person needs a **company** before they can be added.
4	Choose the **Driver** (required - the button stays greyed out until you do).
5	Press **Check in all N people on this vehicle** and **OK** on the pop-up. Anyone not on the list will not be on the muster.

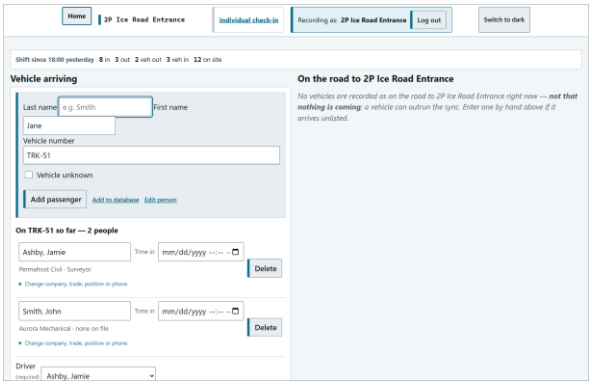

"Is this the same person?" prompt.

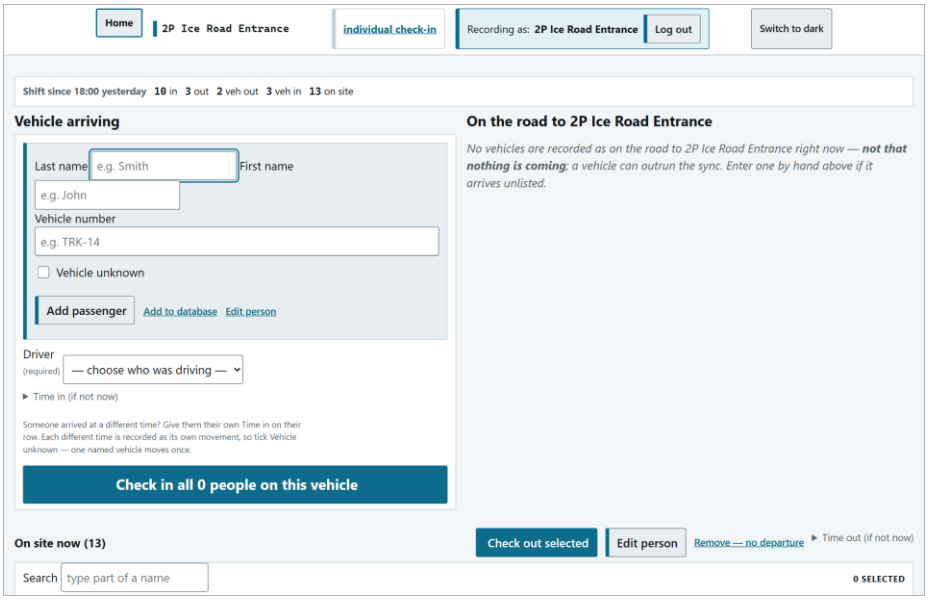

First passenger added to the vehicle.

A new person - company required.

Two people aboard and a driver chosen - ready.

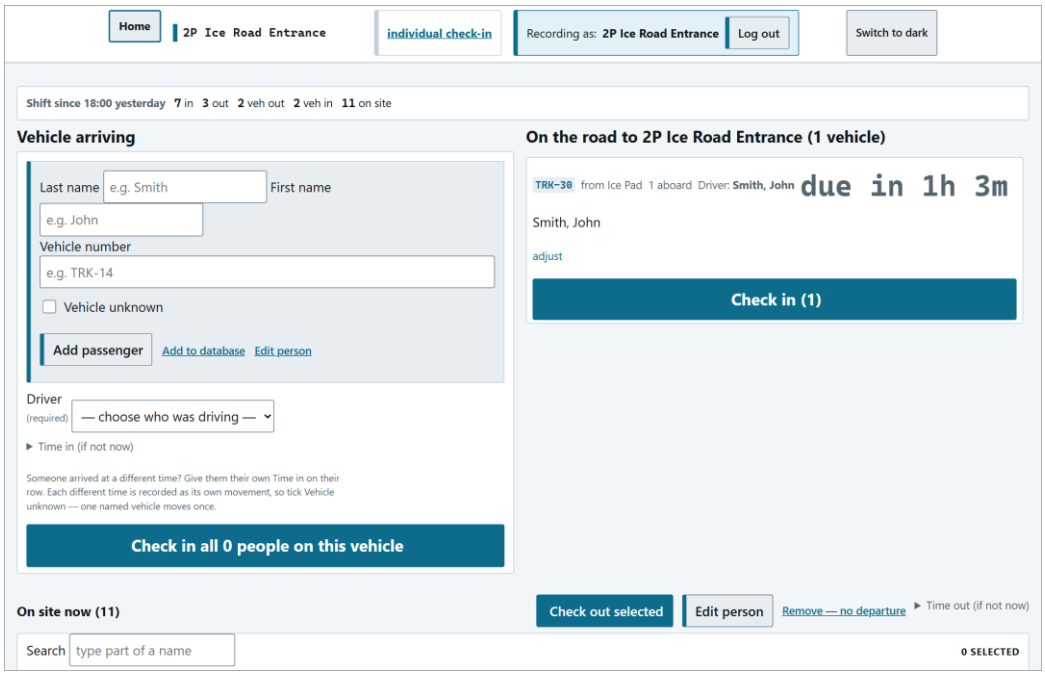

Checked in: counters up, form cleared for the next vehicle.

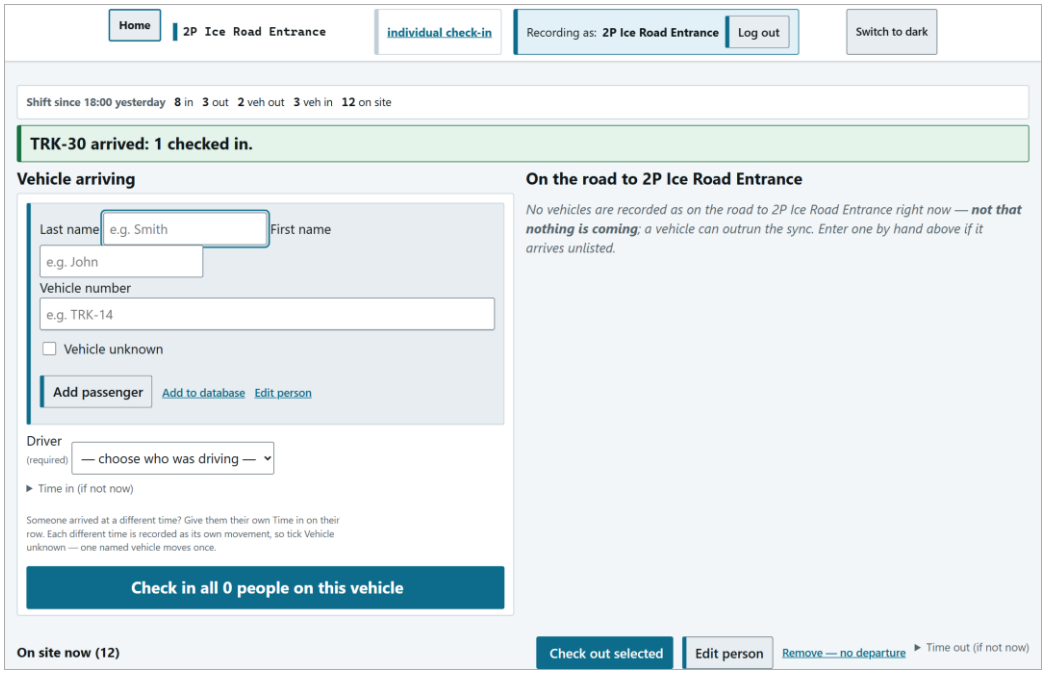

Expected Arrivals

When another post dispatches a vehicle to you, it appears under **On the road to <post>** on the vehicle page with its manifest, driver and countdown (e.g. "TRK-30 from Ice Pad - 1 aboard - Driver: Smith, John - due in 1h 5m").

1	When it arrives, click the vehicle's row to open it.
2	Press **Check in (N)** - everyone on the manifest is checked in with one tap.
3	A green banner confirms, e.g. **"TRK-30 arrived: 1 checked in."**

An expected vehicle opened, ready to check in.

"TRK-30 arrived: 1 checked in."

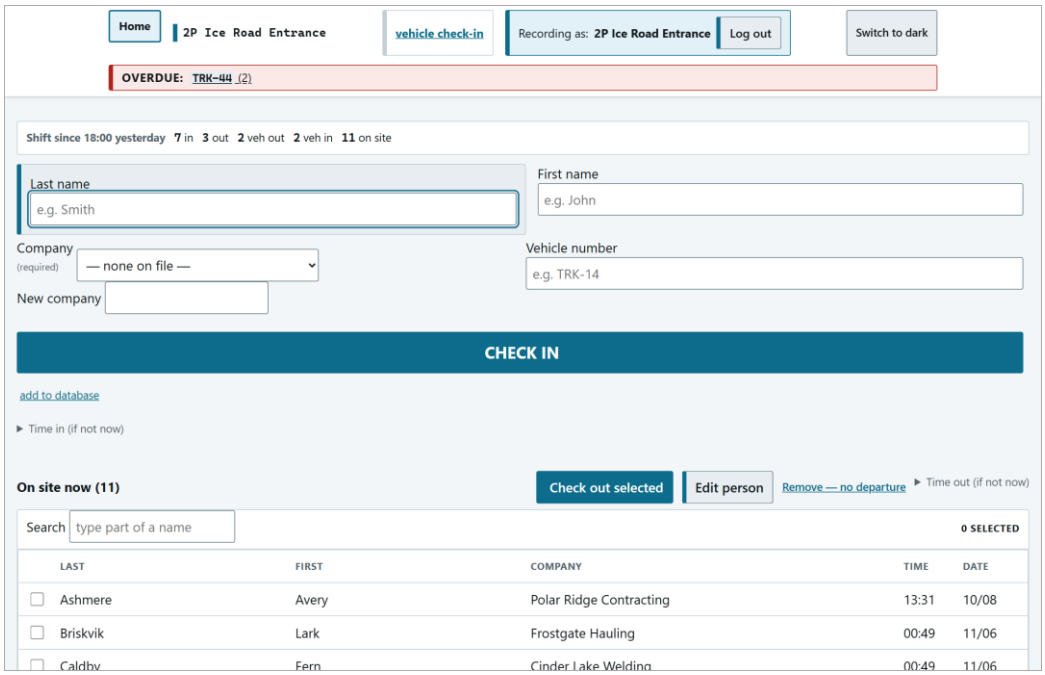

If nothing is listed it does not mean nothing is coming - a vehicle can arrive before the record syncs. Enter it by hand on the left.

Red Alert Bars

Two red bars can appear across the top of every page. Neither stops you working the gate.

OVERDUE

A vehicle has passed its deadline without its arrival being recorded. The bar names the vehicle and how many people are aboard (e.g. "OVERDUE: TRK-12 (2)").

The OVERDUE bar on the gate screen.

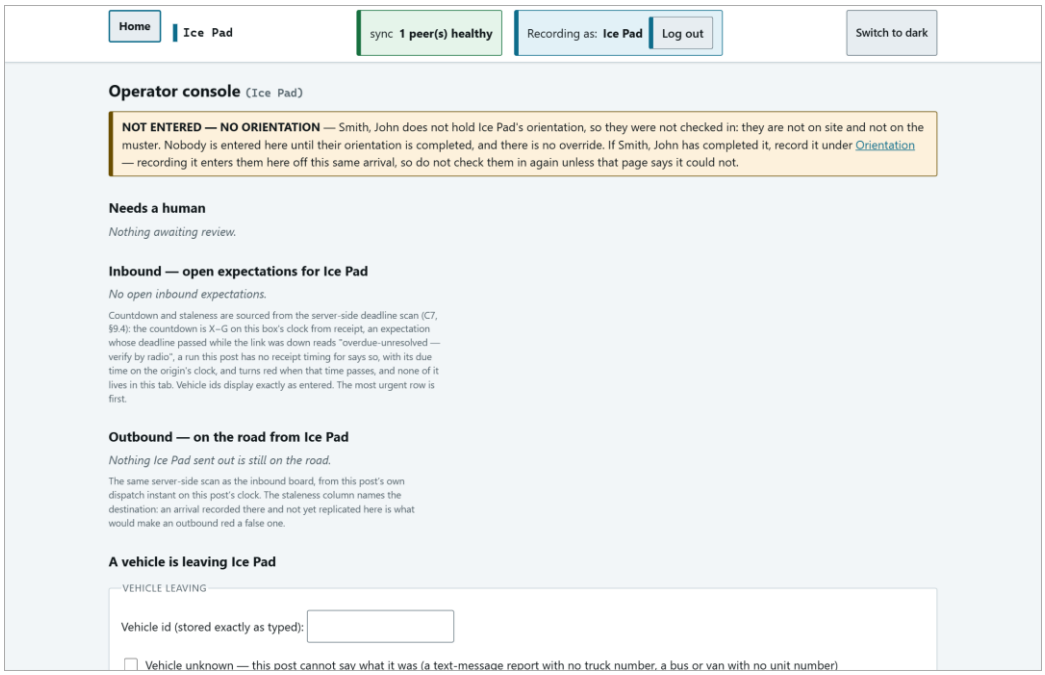

1	Tell whoever is running dispatch, or follow the **Dispatch Guide** (Overdue Vehicles) if that is you.
2	If the vehicle is actually at your gate, check its people in (Expected Arrivals) - that closes the trip and clears the bar.

LOST SIGNAL

Your post cannot reach the other posts. Keep working - see **Lost Signal**.

Orientation

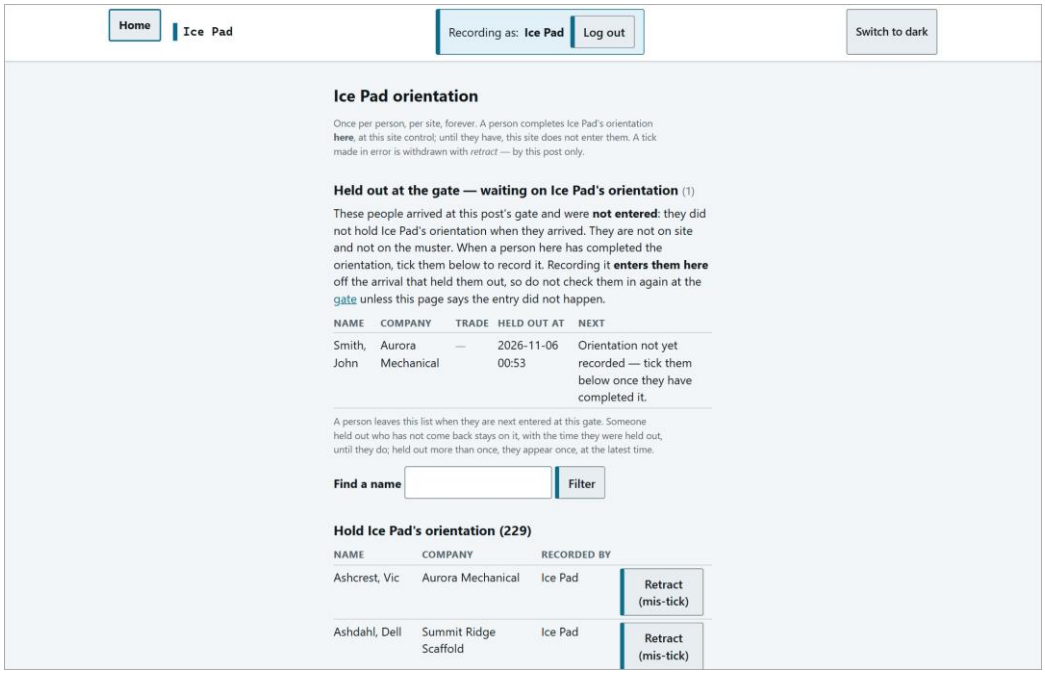

Some posts (e.g. Ice Pad, NPF, NDB, STP) require their own orientation, **once per person, per site**. Someone arriving without it is **not checked in** - there is no override.

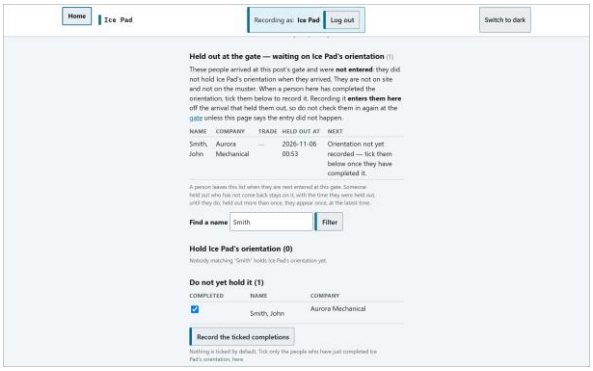

"NOT ENTERED - NO ORIENTATION" on the console: the person is not on site and not on the muster.

Recording an orientation

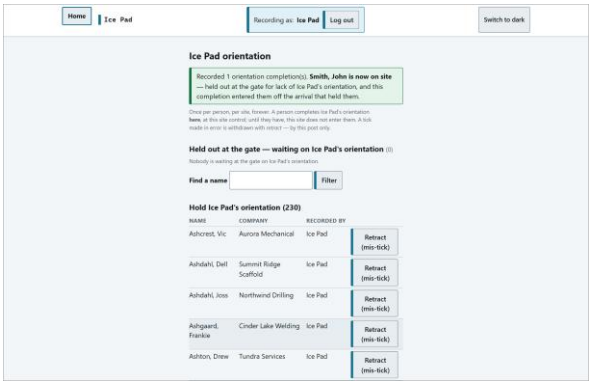

1	Open the post's **orientation** page. People refused at the gate are listed under **Held out at the gate - waiting on orientation**.
2	Find the person (**Find a name** / Filter), tick **COMPLETED**, and press **Record the ticked completions**.
3	If they were held out at the gate, recording the completion **checks them in automatically** - do not check them in again.

The orientation page.

Filtered to one person and ticked.

"Recorded 1 orientation completion(s). Smith, John is now on site..."

Ticked the wrong person? Use **Retract (mis-tick)** on their row.

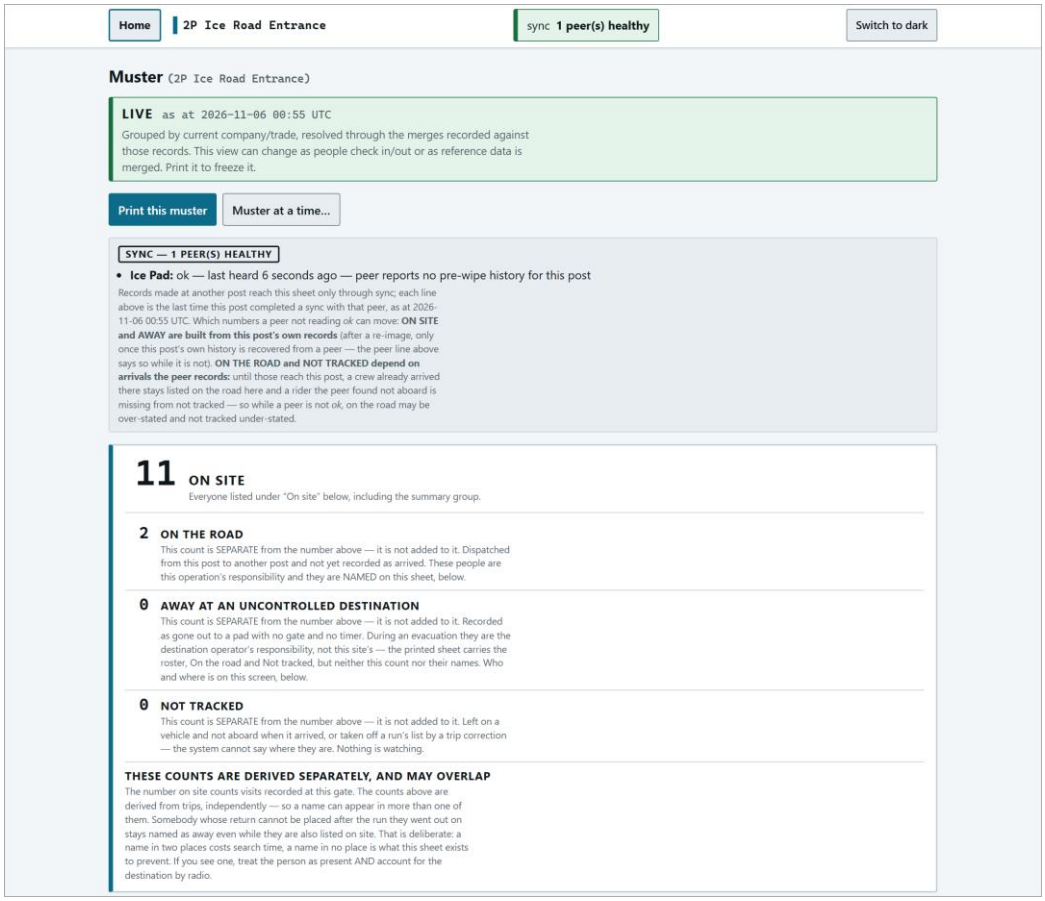

Muster

Evacuation or drill: open **muster** (footer link), press **Print this muster**, then **Print** (or Ctrl + P).

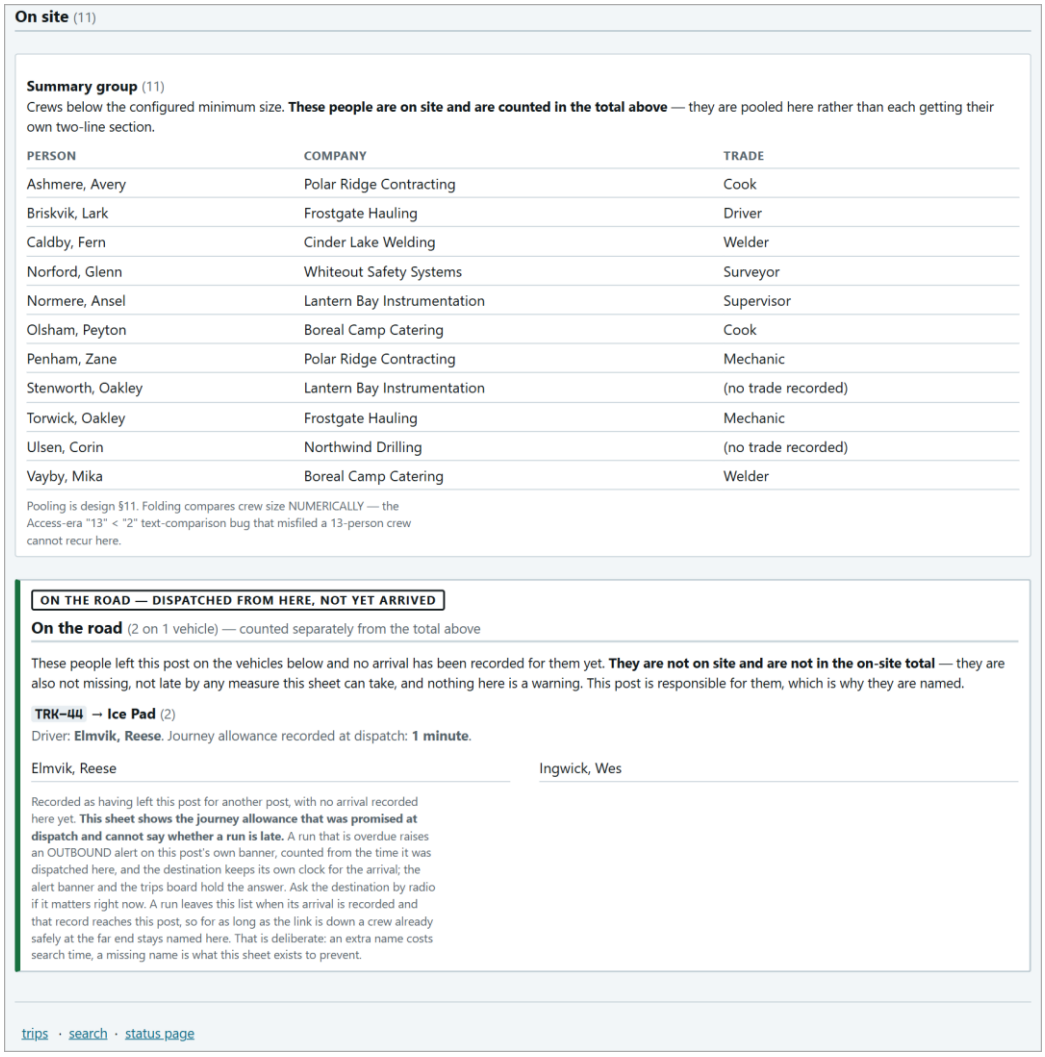

The live muster shows the time it was taken, the sync state, and separate counts:

ON SITE	Everyone checked in here, listed by company / trade below. Small crews are pooled in a "Summary group".
ON THE ROAD	Dispatched from here and not yet arrived - **named**, and this post's responsibility. Not in the on-site total.
AWAY AT AN UNCONTROLLED DESTINATION	Gone to a pad with no gate or timer.
NOT TRACKED	The system cannot say where they are - account for them by radio.

The counts may overlap on purpose. If a name appears in two places, treat the person as present AND account for the other location by radio.

Live muster - top: sync status and the counts.

On site (11)

Summary group (11)

Crews below the configured minimum size. **These people are on site and are counted in the total above** — they are pooled here rather than each getting their own two-line section.

PERSON	COMPANY	TRADE
Ashmere, Avery	Polar Ridge Contracting	Cook
Briskvik, Lark	Frostgate Hauling	Driver
Caldby, Fern	Cinder Lake Welding	Welder
Norford, Glenn	Whiteout Safety Systems	Surveyor
Normere, Ansel	Lantern Bay Instrumentation	Supervisor
Olsham, Peyton	Boreal Camp Catering	Cook
Penham, Zane	Polar Ridge Contracting	Mechanic
Stenworth, Oakley	Lantern Bay Instrumentation	(no trade recorded)
Torwick, Oakley	Frostgate Hauling	Mechanic
Ulsen, Corin	Northwind Drilling	(no trade recorded)
Vayby, Mika	Boreal Camp Catering	Welder

Pooling is design §11. Folding compares crew size NUMERICALLY — the Access-era "13" < "2" text-comparison bug that misfiled a 13-person crew cannot recur here.

ON THE ROAD — DISPATCHED FROM HERE, NOT YET ARRIVED

On the road (2 on 1 vehicle) — counted separately from the total above

These people left this post on the vehicles below and no arrival has been recorded for them yet. **They are not on site and are not in the on-site total** — they are also not missing, not late by any measure this sheet can take, and nothing here is a warning. This post is responsible for them, which is why they are named.

`TRK-44` → **Ice Pad** (2)

Driver: **Elmvik, Reese**. Journey allowance recorded at dispatch: **1 minute**.

Elmvik, Reese

Ingwick, Wes

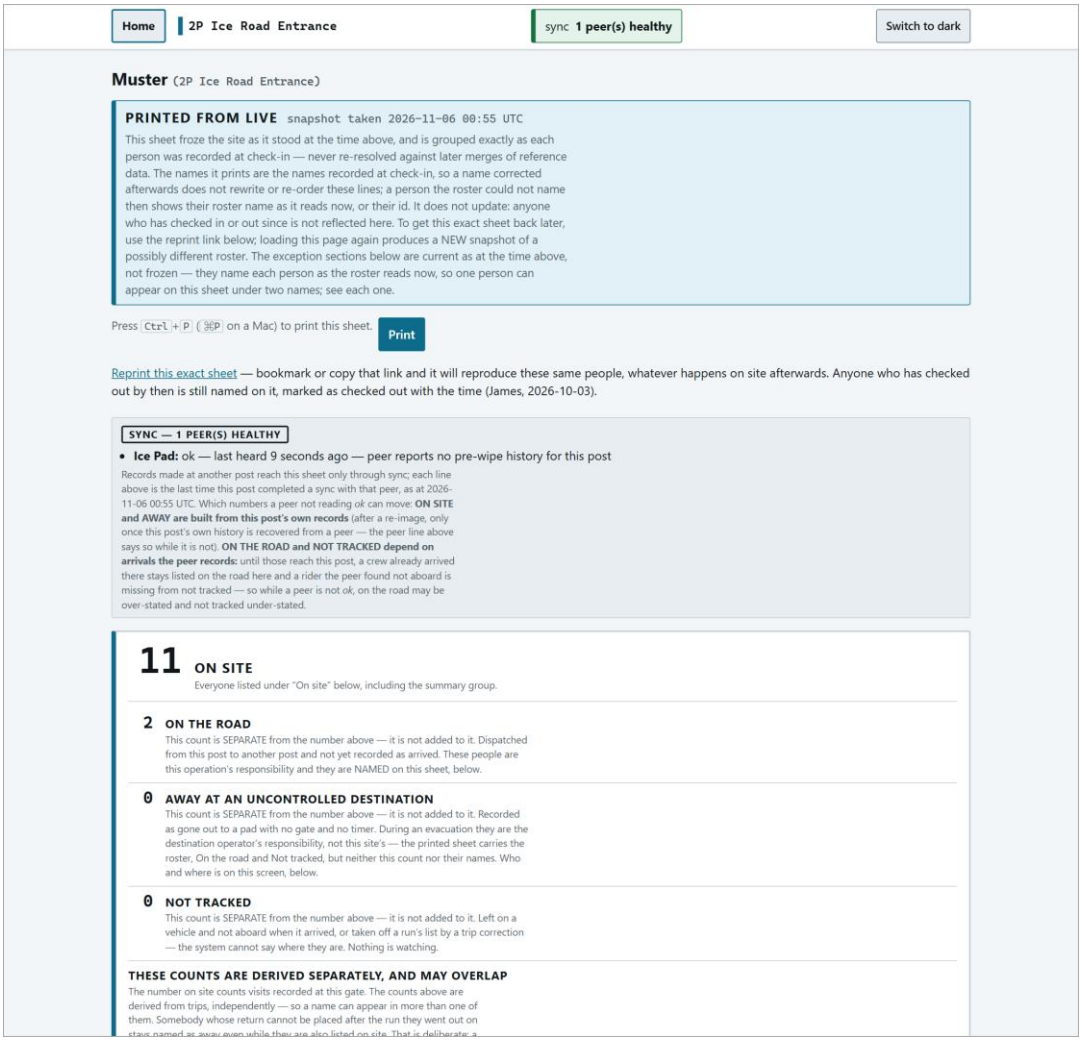

Recorded as having left this post for another post, with no arrival recorded here yet. **This sheet shows the journey allowance that was promised at dispatch and cannot say whether a run is late.** A run that is overdue raises an OUTBOUND alert on this post's own banner, counted from the time it was dispatched here, and the destination keeps its own clock for the arrival; the alert banner and the trips board hold the answer. Ask the destination by radio if it matters right now. A run leaves this list when its arrival is recorded and that record reaches this post, so for as long as the link is down a crew already safely at the far end stays named here. That is deliberate: an extra name costs search time, a missing name is what this sheet exists to prevent.

trips · search · status page

Live muster - bottom: the people on site and on the road, by name.

Printing

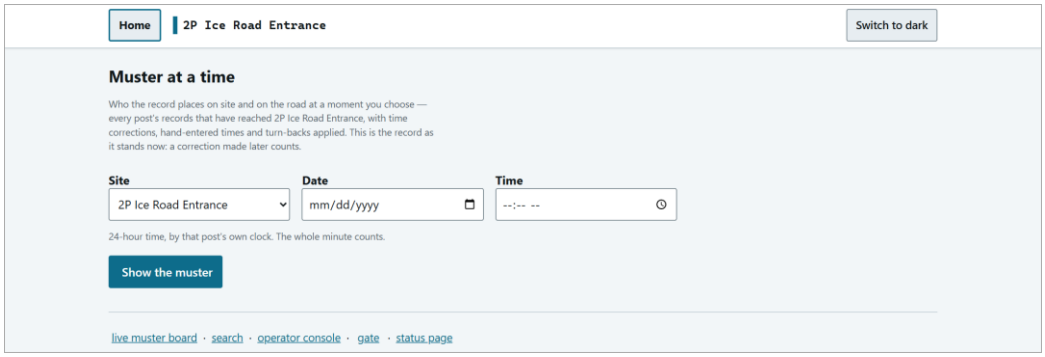

Print this muster freezes a snapshot ("PRINTED FROM LIVE snapshot taken <time>"). Press **Print** or Ctrl + P. The **Reprint this exact sheet** link reproduces the same sheet later.

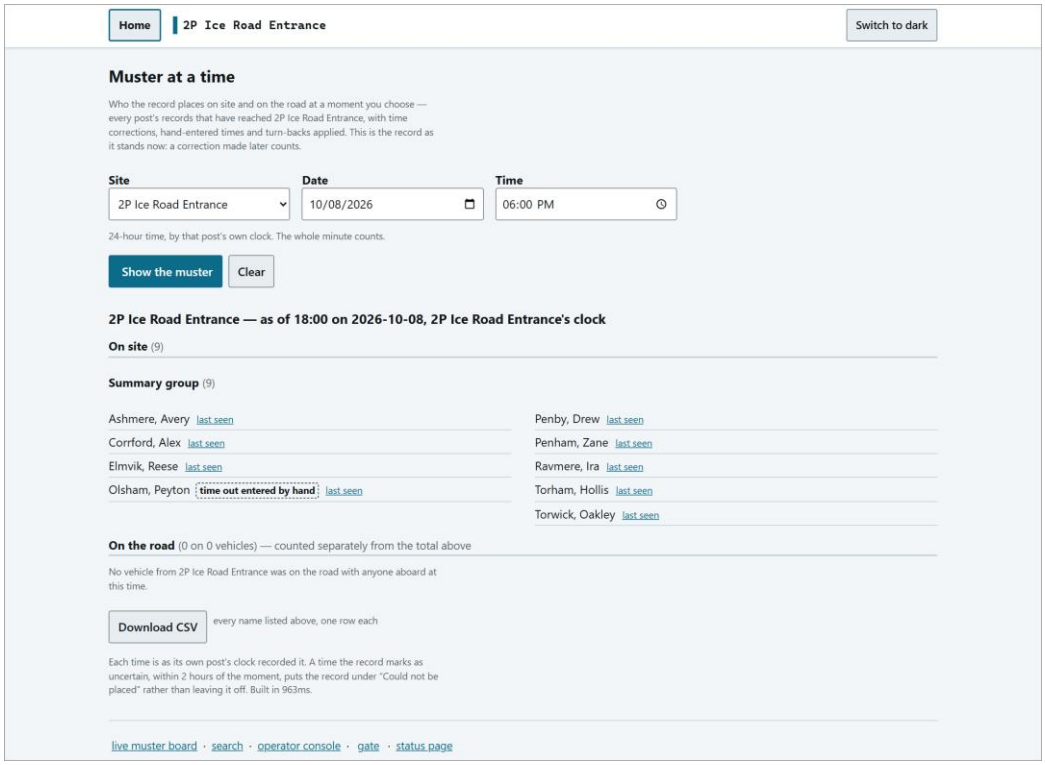

The print sheet.

Muster at a past time

Muster at a time... shows who was on site at any past moment: pick the site, date and time (24-hour) and press **Show the muster**. Times on the muster are shown in UTC.

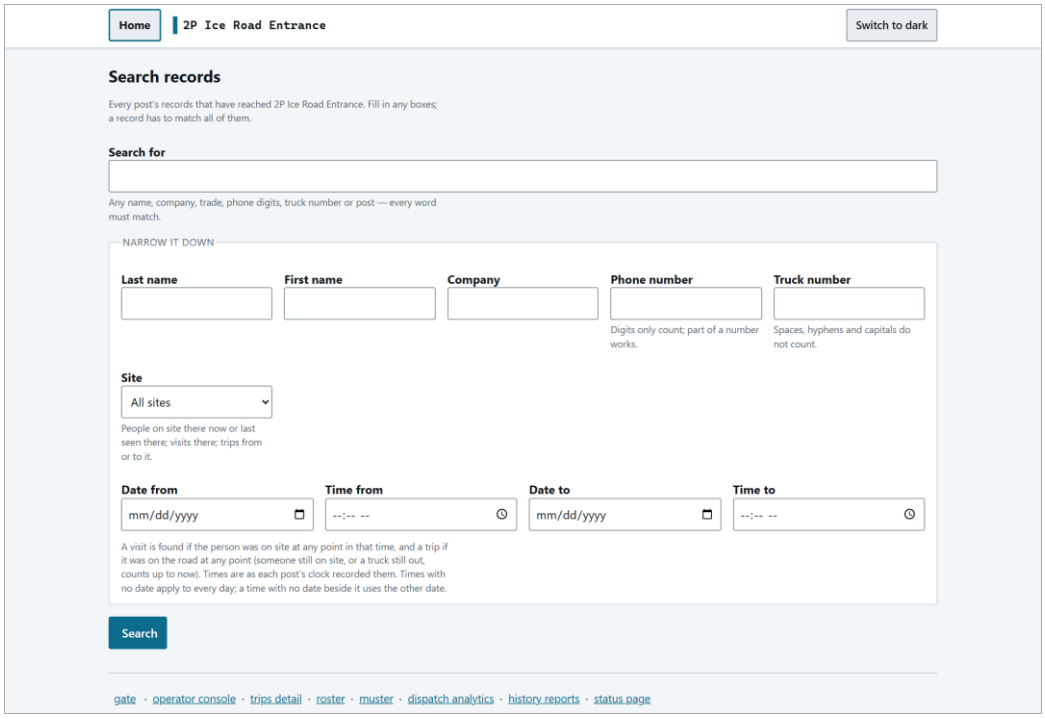

Muster at a time - the form.

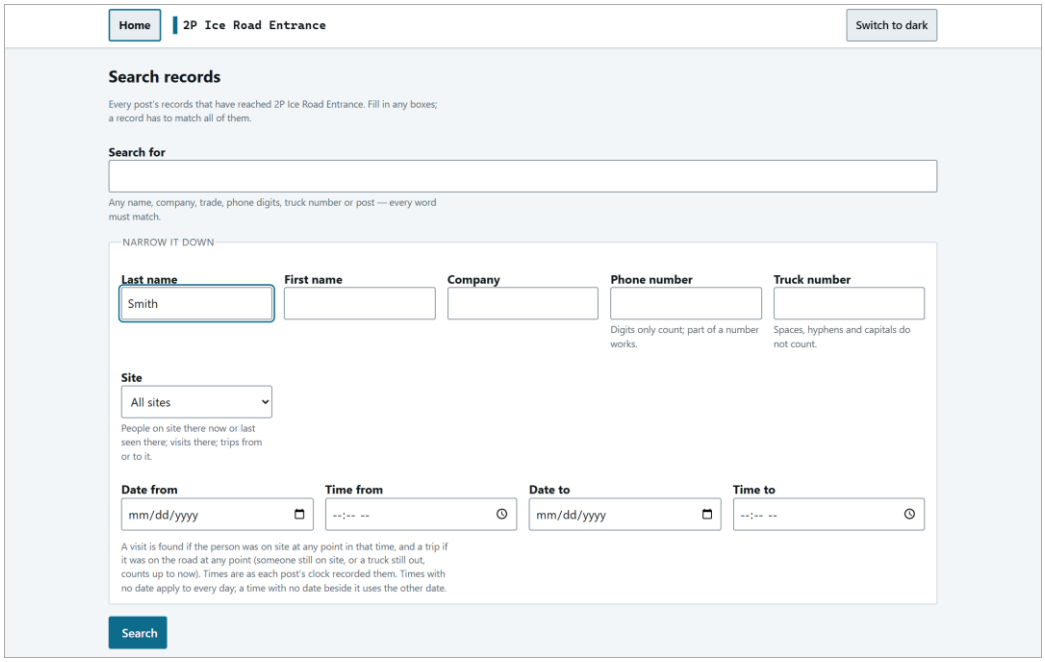

The result.

Search

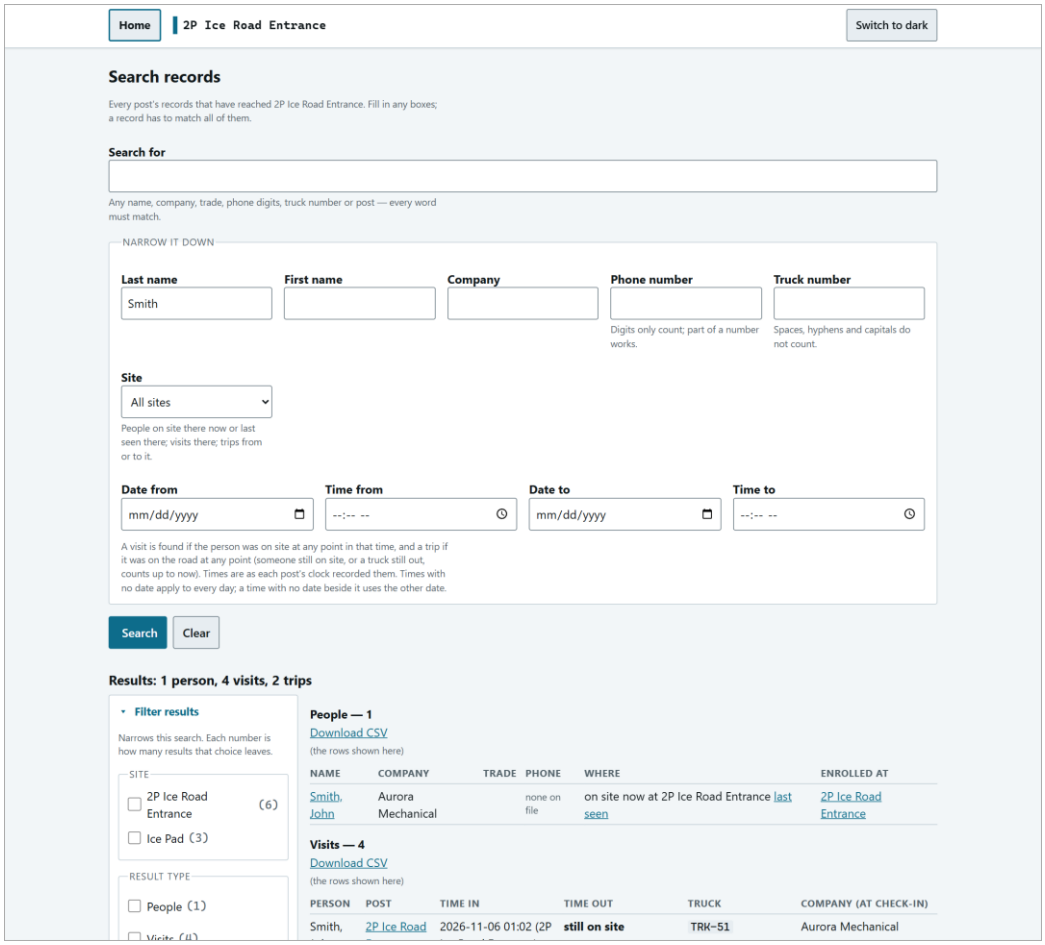

search (footer link) finds people, visits and trips. Use **Search for** for free text (any name, company, trade, phone digits, truck number or post - every word must match) or the separate fields. Truck numbers ignore spaces, hyphens and capitals. Narrow by **Site** and a date / time range.

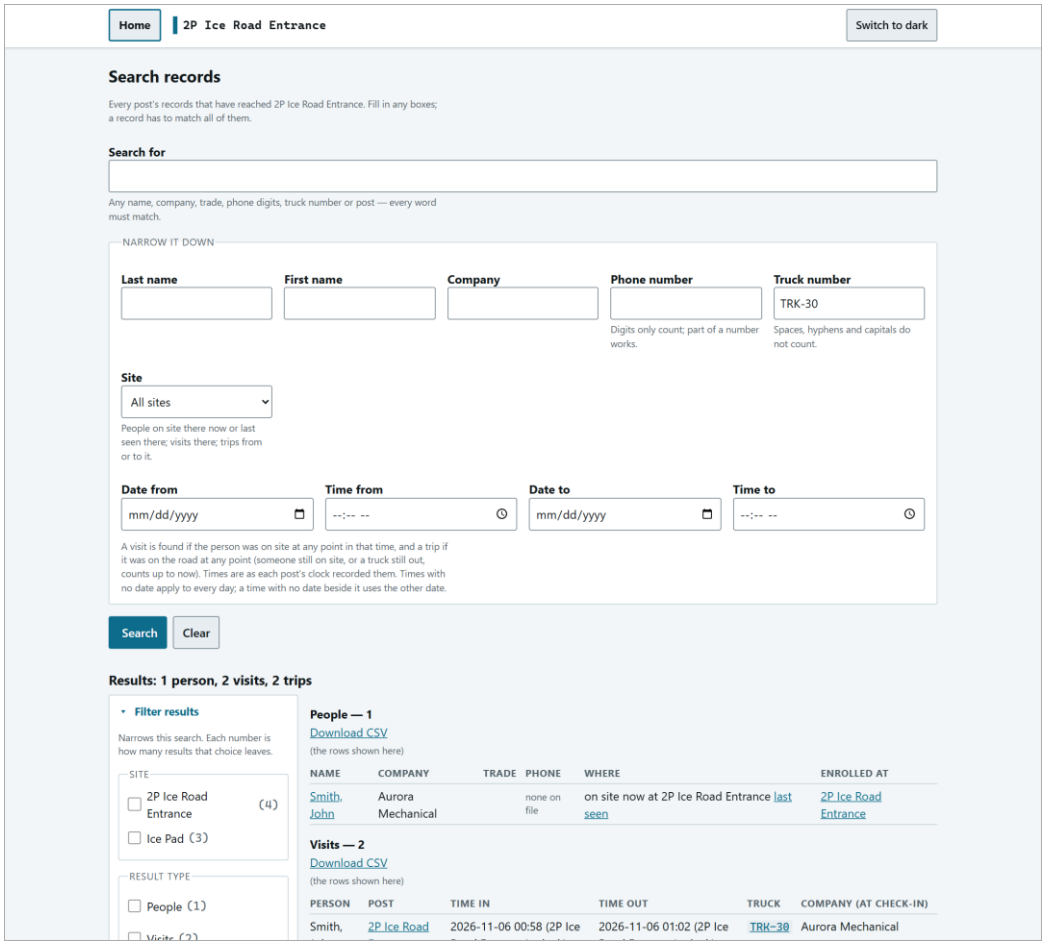

The search form.

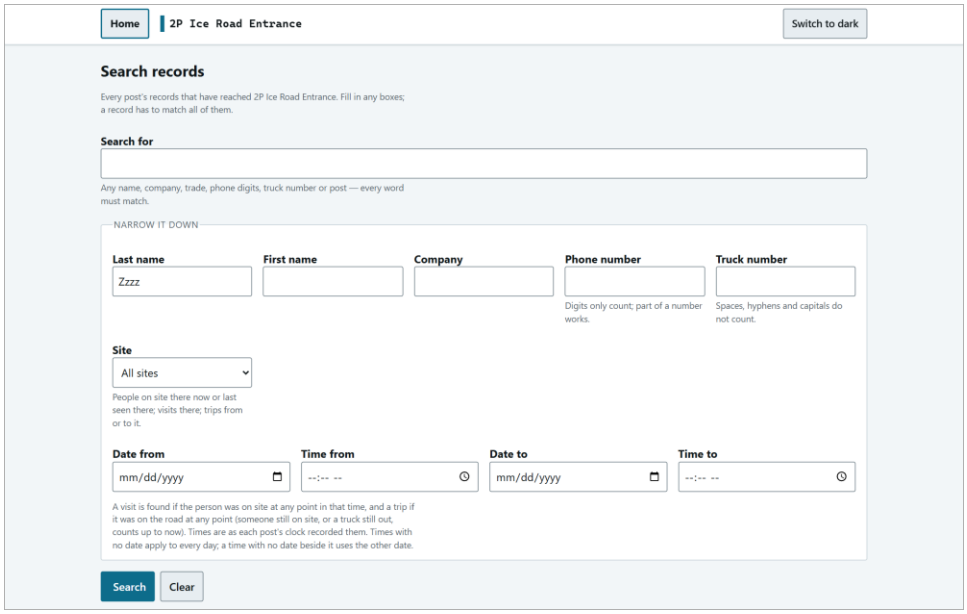

A search filled in.

Results: People, Visits and Trips, with filters and Download CSV for each.

Searching by truck number.

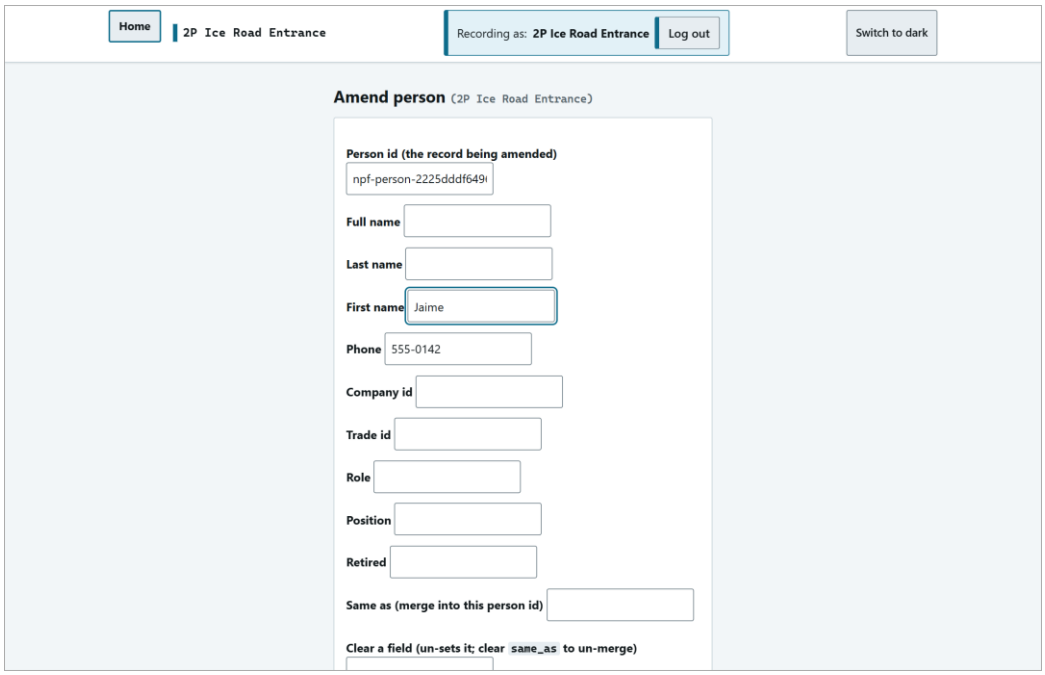

No match - all counts show 0.

Corrections

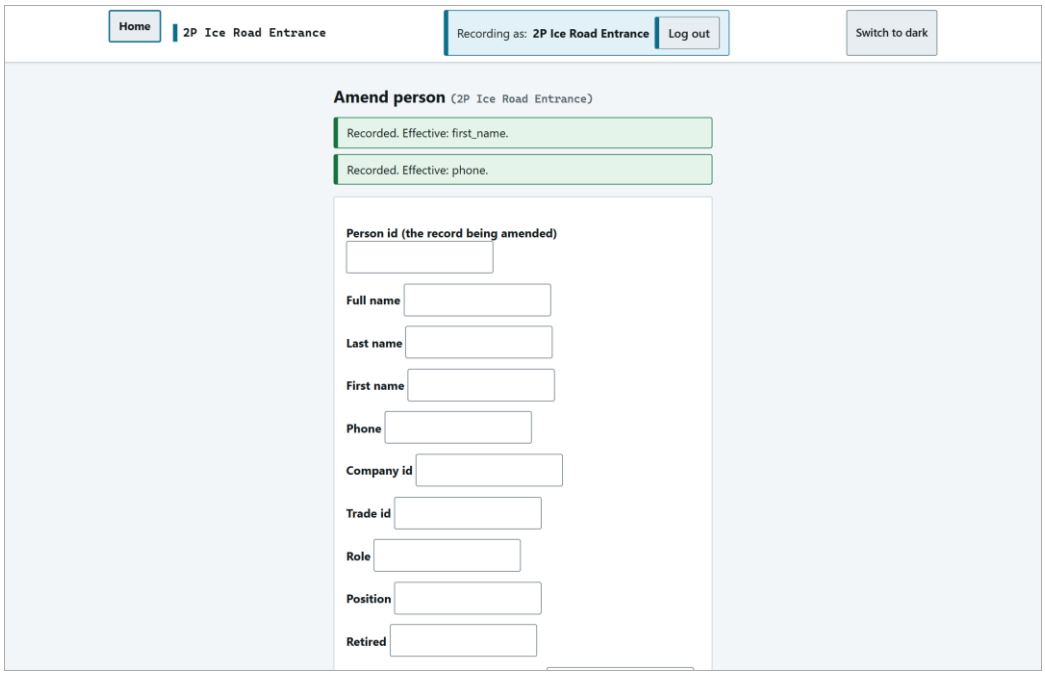

Nothing is ever erased - every correction is added to the record and earlier values are kept.

Edit a person

Tick the person in **On site now** and press **Edit person** (their id is filled in for you). Fill in only the fields to change - a blank field changes nothing - and press **Amend this person**. Company and trade are entered as **ids** (listed on the page).

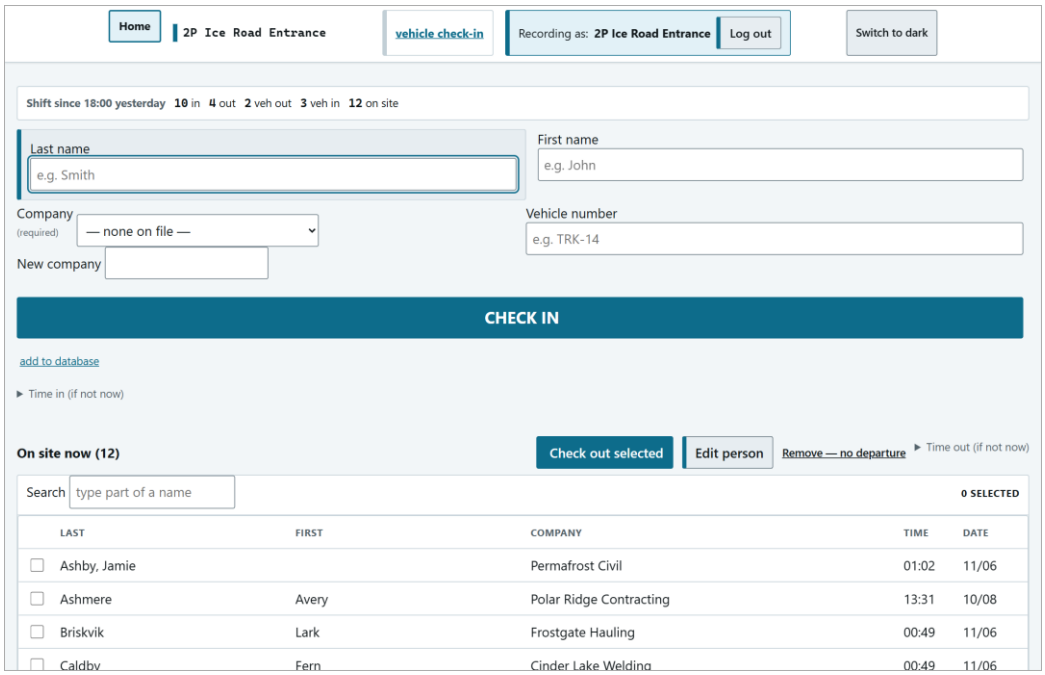

Edit person with one field changed.

"Recorded. Effective: ..."

Remove - no departure

For someone entered by mistake: tick them and click **Remove - no departure**. The pop-up lists exactly who will be removed - "Is that everyone, and only them?" No departure or trip is recorded.

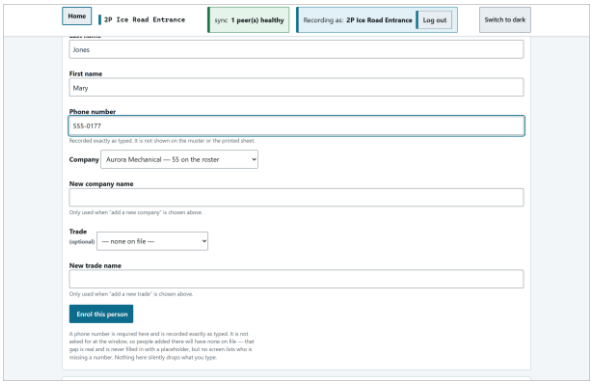

The gate after removing a mistaken entry.

Wrong details on a **trip** (driver, vehicle, who was aboard) are corrected by dispatch - see the Dispatch Guide.

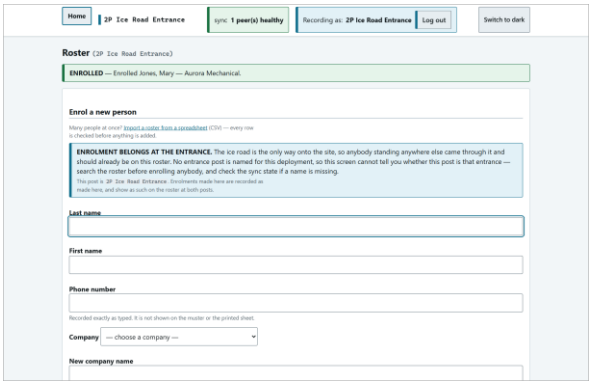

Roster

Most people are added to the roster automatically the first time they are checked in. To enrol someone in advance, use **add to database** on the gate (the roster page):

1	Fill in **Last name**, **First name**, **Phone** (required - not shown on the muster) and **Company**; Trade is optional.
2	Press **Enrol this person**. A green **ENROLLED** banner confirms.

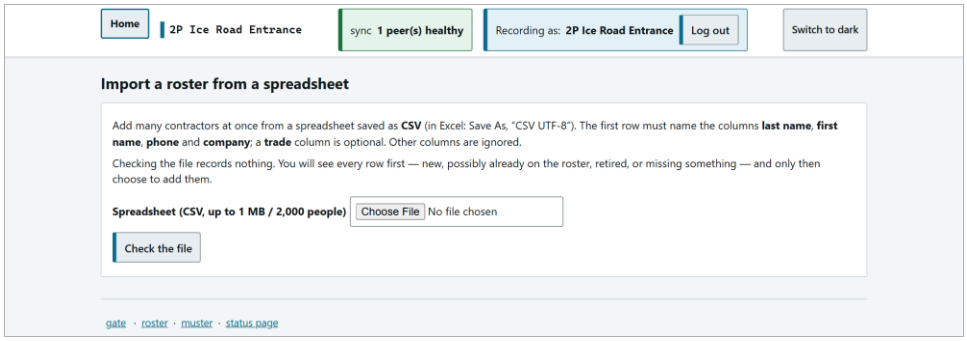

Enrolment form filled in.

"ENROLLED - Enrolled Jones, Mary - Aurora Mechanical."

A whole list can be loaded with **Import a roster from a spreadsheet (CSV)** (columns: last name, first name, phone, company, optional trade). **Check the file** previews it and records nothing until you confirm.

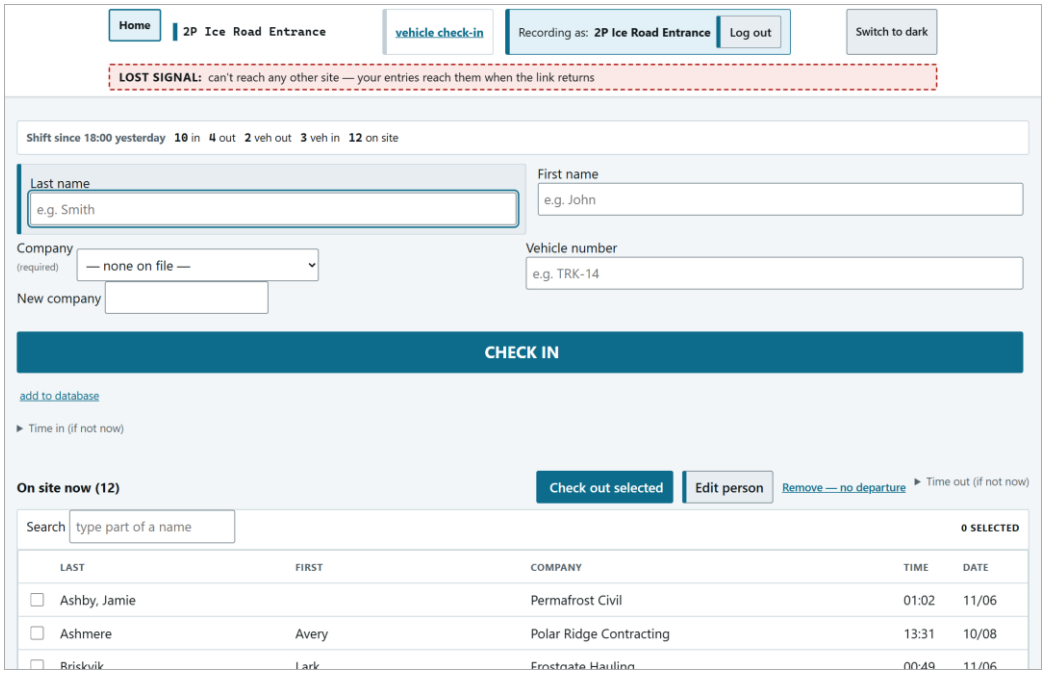

The roster import page.

Lost Signal

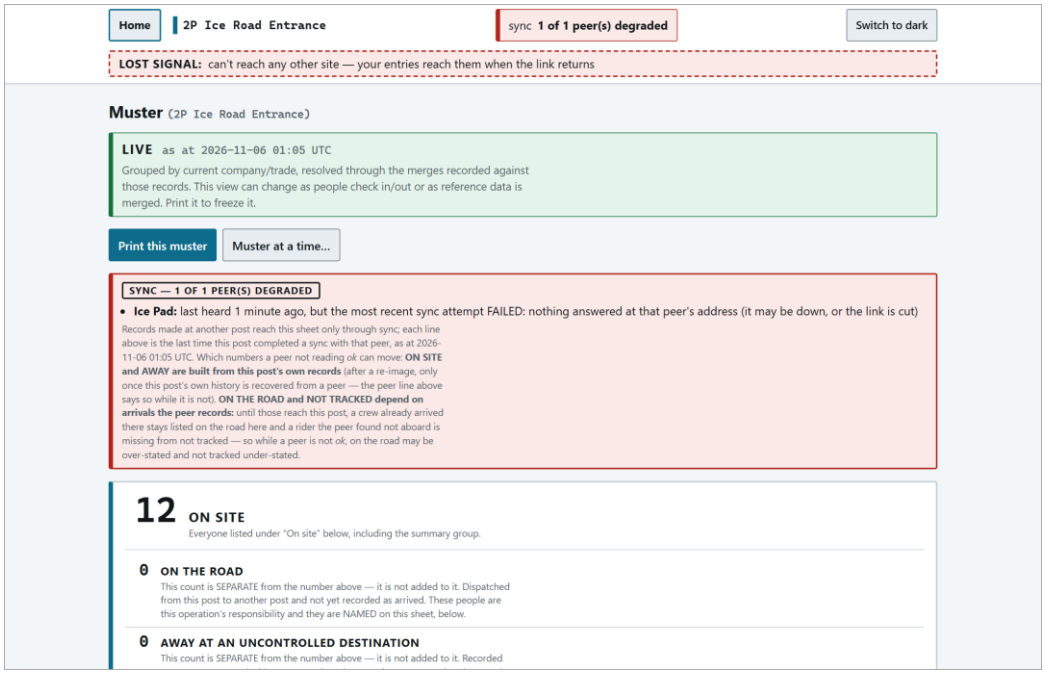

Each post keeps working on its own when the link (Starlink) drops. **Carry on recording as normal** - entries are kept and reach the other posts automatically when the link returns.

When a post has not heard from the others for about 30 seconds, a red **LOST SIGNAL** banner appears on every page and the sync pill turns red:

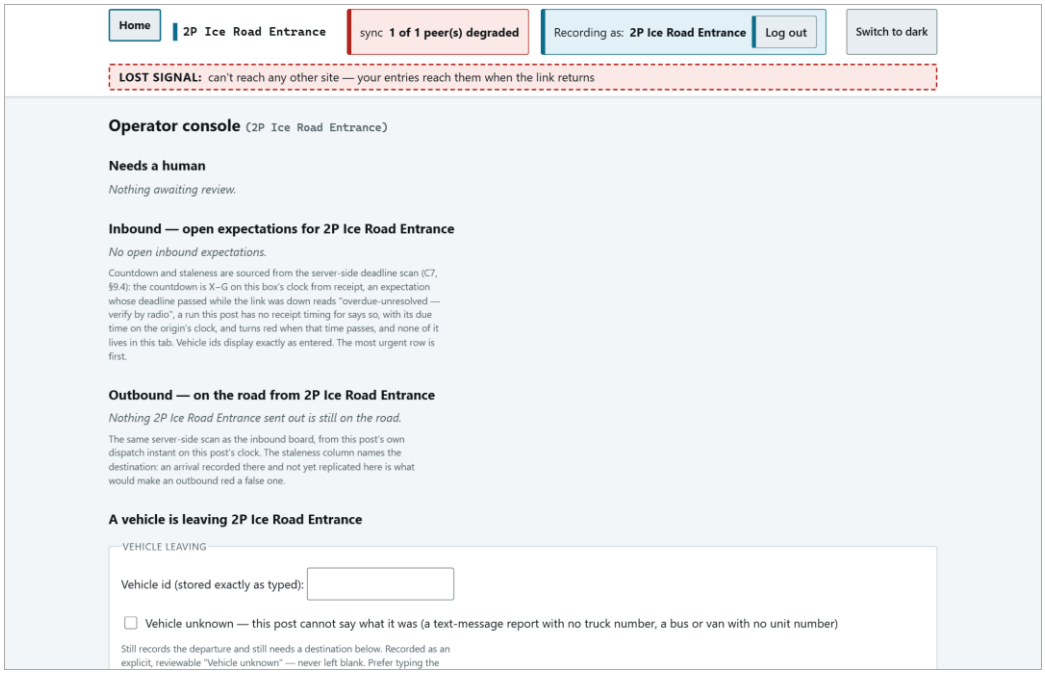

"LOST SIGNAL: can't reach any other site - your entries reach them when the link returns."

While the signal is lost, the muster and analytics mark the other posts **STALE - LAST KNOWN** and leave them out of the totals - **verify those by radio**. Vehicles on their way to you may not show up as expected until the link returns.

The muster during lost signal.

The operator console during lost signal.

Troubleshooting

Situation	What to do
"a trip with a destination requires a deadline"	Click **Deadline: not set (change)** and enter the travel minutes. It is never filled in for you.
Pressed CHECK IN / Confirm and nothing seemed to happen	Success is silent. Check the **On site now** list and the shift counters.
"...a company is required..." (mentions Passenger 1)	Pick a company, or choose "not listed" and type it. "Passenger 1" is normal on the individual screen.
Check in all ... button is greyed out	Choose the **Driver** first.
Someone who arrived was not checked in	They may lack this post's orientation - see Orientation. Otherwise ask dispatch to check the trip card.
"NOT ENTERED - NO ORIENTATION"	Record their orientation on the orientation page; that checks them in. No override exists.
Red OVERDUE bar	Tell dispatch. If the vehicle is at your gate, check its people in.
Red LOST SIGNAL banner	Keep working. Verify other posts by radio. Entries sync when the link returns.
A name appears twice on the muster	Deliberate. Treat the person as present and account for the other place by radio.
Times look different on the muster	The muster and history show **UTC**; the gate shows the post's local time.
Entered someone by mistake	Tick them > **Remove - no departure**.
Wrong details on a person	**Edit person** (uses ids shown on the page). Trip details: dispatch.

Quick Reference

Check in	Last name > pick > (company) > **CHECK IN** > OK > check the list
Check out	Tick > **Check out selected** > vehicle, driver, destination, **deadline minutes** > Confirm > OK
Vehicle arrives	Vehicle page: add passengers > driver > **Check in all** > OK
Expected vehicle	Vehicle page > open the row > **Check in (N)**
Red OVERDUE bar	Tell dispatch; check in the vehicle if it is at your gate
Orientation	Orientation page > tick COMPLETED > **Record the ticked completions**
EMERGENCY	**muster** > **Print this muster** > **Print**
Find anything	**search** > any field > **Search**
Lost signal	Keep working; verify other posts by radio

Log out at the end of your shift.
